Load this skill when helping users configure Hermes, troubleshoot issues, spawn agent instances, or make code contributions.\\nversion: 2.0.0\\nauthor: Hermes Agent + Teknium\\nlicense: MIT\\nmetadata:\\n hermes:\\n   tags: [hermes, setup, configuration, multi-agent, spawning, cli, gateway, development]\\n   homepage: https://github.com/NousResearch/hermes-agent\\n   related_skills: [claude-code, codex, opencode]\\n---\\n\\n# Hermes Agent\\n\\nHermes Agent is an open-source AI agent framework by Nous Research that runs in your terminal, messaging platforms, and IDEs. It belongs to the same category as Claude Code (Anthropic), Codex (OpenAI), and OpenClaw — autonomous coding and task-execution agents that use tool calling to interact with your system. Hermes works with any LLM provider (OpenRouter, Anthropic, OpenAI, DeepSeek, local models, and 15+ others) and runs on Linux, macOS, and WSL.\\n\\nWhat makes Hermes different:\\n\\n- **Self-improving through skills** — Hermes learns from experience by saving reusable procedures as skills. When it solves a complex problem, discovers a workflow, or gets corrected, it can persist

that knowledge as a skill document that loads into future sessions. Skills accumulate over time, making the agent better at your specific tasks and environment.\\n- **Persistent memory across sessions** — remembers who you are, your preferences, environment details, and lessons learned. Pluggable memory backends (built-in, Honcho, Mem0, and more) let you choose how memory works.\\n- **Multi-platform gateway** — the same agent runs on Telegram, Discord, Slack, WhatsApp, Signal, Matrix, Email, and 10+ other platforms with full tool access, not just chat.\\n- **Provider-agnostic** — swap models and providers mid-workflow without changing anything else. Credential pools rotate across multiple API keys automatically.\\n- **Profiles** — run multiple independent Hermes instances with isolated configs, sessions, skills, and memory.\\n- **Extensible** — plugins, MCP servers, custom tools, webhook triggers, cron scheduling, and the full Python ecosystem.\\n\\nPeople use Hermes for software development, research, system administration, data analysis, content creation, home automation, and anything else that benefits from an AI agent with persistent context and full system access.\\n\\n**This skill helps you work with Hermes Agent effectively** — setting it up, configuring features, spawning additional agent instances, troubleshooting issues, finding the right commands and settings, and understanding how the system works when you need to extend or contribute to it.\\n\\n**Docs:** https://hermes-agent.nousresearch.com/docs/\\n\\n## Quick Start\\n\\n`bash\\n# Install\\ncurl -fsSL https://raw.githubusercontent.com/NousResearch/hermes-agent/main/scripts/install.sh | bash\\n\\n# Interactive chat (default)\\nhermes\\n\\n# Single query\\nhermes chat -q \\\"What is the capital of France?\\\"\\n\\n# Setup wizard\\nhermes setup\\n\\n# Change model/provider\\nhermes model\\n\\n# Check health\\nhermes doctor\\n` \\n\\n---\\n\\n## CLI Reference\\n\\n### Global Flags\\n\\n`\\nhermes [flags] [command]\\n\\n --version, -V   Show version\\n --resume, -r SESSION   Resume session by ID or title\\n --continue, -c [NAME]   Resume by name, or most recent session\\n --worktree, -w   Isolated git worktree mode (parallel agents)\\n --skills, -s SKILL   Preload skills (comma-separate or repeat)\\n --profile, -p NAME   Use a named profile\\n --yolo   Skip dangerous command approval\\n --pass-session-id   Include session ID in system prompt\\n` \\n\\nNo subcommand defaults to `chat`.\\n\\n### Chat\\n\\n`\\nhermes chat [flags]\\n -q, --query TEXT   Single query, non-interactive\\n -m, --model MODEL   Model (e.g. anthropic/claude-sonnet-4)\\n -t, --toolsets LIST   Comma-separated toolsets\\n --provider PROVIDER   Force provider (openrouter, anthropic, nous, etc.)\\n -v, --verbose   Verbose output\\n -Q, --quiet   Suppress banner, spinner, tool previews\\n --checkpoints   Enable filesystem checkpoints (/rollback)\\n --source TAG   Session source`

Set via `hermes model` or `hermes setup`.\\n\\n| Provider | Auth | Key env var |\\n|----------|------|----------|\\n| OpenRouter | API key | `OPENROUTER_API_KEY` |\\n| Anthropic | API key | `ANTHROPIC_API_KEY` |\\n| Nous Portal | OAuth | `hermes login --provider nous` |\\n| OpenAI Codex | OAuth | `hermes login --provider openai-codex` |\\n| GitHub Copilot | Token | `COPILOT_GITHUB_TOKEN` |\\n| Google Gemini | API key | `GOOGLE_API_KEY` or `GEMINI_API_KEY` |\\n| DeepSeek | API key | `DEEPSEEK_API_KEY` |\\n| xAI / Grok | API key | `XAI_API_KEY` |\\n| Hugging Face | Token | `HF_TOKEN` |\\n| Z.AI / GLM | API key | `GLM_API_KEY` |\\n| MiniMax | API key | `MINIMAX_API_KEY` |\\n| MiniMax CN | API key | `MINIMAX_CN_API_KEY` |\\n| Kimi / Moonshot | API key | `KIMI_API_KEY` |\\n| Alibaba / DashScope | API key | `DASHSCOPE_API_KEY` |\\n| Xiaomi MiMo | API key | `XIAOMI_API_KEY` |\\n| Kilo Code | API key | `KILOCODE_API_KEY` |\\n| AI Gateway (Vercel) | API key | `AI_GATEWAY_API_KEY` |\\n| OpenCode Zen | API key | `OPENCODE_ZEN_API_KEY` |\\n| OpenCode Go | API key | `OPENCODE_GO_API_KEY` |\\n| Qwen OAuth | OAuth | `hermes login --provider qwen-oauth` |\\n| Custom endpoint | Config | `model.base_url` + `model.api_key` in config.yaml |\\n| GitHub Copilot ACP | External | `COPILOT_CLI_PATH` or Copilot CLI |\\n\\nFull provider docs: https://hermes-agent.nousresearch.com/docs/integrations/providers\\n\\n### Toolsets\\n\\nEnable/disable via `hermes tools` (interactive) or `hermes tools enable/disable NAME`.\\n\\n| Toolset | What it provides |\\n|---------|----------|\\n| `web` | Web search and content extraction |\\n| `browser` | Browser automation (Browserbase, Camofox, or local Chromium) |\\n| `terminal` | Shell commands and process management

|\\n| `file` | File read/write/search/patch |\\n| `code_execution` | Sandboxed Python execution |\\n| `vision` | Image analysis |\\n| `image_gen` | AI image generation |\\n| `tts` | Text-to-speech |\\n| `skills` | Skill browsing and management |\\n| `memory` | Persistent cross-session memory |\\n| `session_search` | Search past conversations |\\n| `delegation` | Subagent task delegation |\\n| `cronjob` | Scheduled task management |\\n| `clarify` | Ask user clarifying questions |\\n| `messaging` | Cross-platform message sending |\\n| `search` | Web search only (subset of `web`) |\\n| `todo` | In-session task planning and tracking |\\n| `rl` | Reinforcement learning tools (off by default) |\\n| `moa` | Mixture of Agents (off by default) |\\n| `homeassistant` | Smart home control (off by default) |\\n\\nTool changes take effect on `/reset` (new session). They do NOT apply mid-conversation to preserve prompt caching.\\n\\n---\\n\\n## Voice & Transcription\\n\\n### STT (Voice → Text)\\n\\nVoice messages from messaging platforms are auto-transcribed.\\n\\nProvider priority (auto-detected):\\n1. **Local faster-whisper** — free, no API key: `pip install faster-whisper` \\n2. **Groq Whisper** — free tier: set `GROQ_API_KEY` \\n3. **OpenAI Whisper** — paid: set `VOICE_TOOLS_OPENAI_KEY` \\n4. **Mistral Voxtral** — set `MISTRAL_API_KEY` \\n\\nConfig:\\n `yaml\\nstt:\\n  enabled: true\\n  provider: local        # local, groq, openai, mistral\\n  local:\\n  model: base          # tiny, base, small, medium, large-v3\\n` \\n\\n### TTS (Text → Voice)\\n\\n| Provider | Env var | Free? |\\n|---------|---------|-------|\\n| Edge TTS | None | Yes (default) |\\n| ElevenLabs | `ELEVENLABS_API_KEY` | Free tier |\\n| OpenAI | `VOICE_TOOLS_OPENAI_KEY` | Paid |\\n| MiniMax | `MINIMAX_API_KEY` | Paid |\\n| Mistral (Voxtral) | `MISTRAL_API_KEY` | Paid |\\n| NeuTTS (local) | None (`pip install neutts[all]` + `espeak-ng`) | Free |\\n\\nVoice commands: `/voice on` (voice-to-voice), `/voice tts` (always voice), `/voice off`.\\n\\n---\\n\\n## Spawning Additional Hermes Instances\\n\\nRun additional Hermes processes as fully independent subprocesses — separate sessions, tools, and environments.\\n\\n### When to Use This vs delegate_task\\n\\n| | `delegate_task` | Spawning `hermes` process |\\n|-|---------|---------|\\n| Isolation | Separate conversation, shared process | Fully independent process |\\n| Duration | Minutes (bounded by parent loop) | Hours/days |\\n| Tool access | Subset of parent's tools | Full tool access |\\n| Interactive | No | Yes (PTY mode) |\\n| Use case | Quick parallel subtasks | Long autonomous missions |\\n\\n### One-Shot Mode\\n\\n `\\nterminal(command=\\\"hermes chat -q 'Research GRPO papers and write summary to ~/research/grpo.md'\\\", timeout=300)\\n\\n# Background for long tasks:\\nterminal(command=\\\"hermes chat -q 'Set up CI/CD for ~/myapp'\\\", background=true)\\n` \\n\\n### Interactive PTY Mode (via tmux)\\n\\nHermes uses prompt_toolkit, which requires a real terminal. Use tmux for interactive spawning:\\n\\n `\\n# Start\\nterminal(command=\\\"tmux new-session -d -s agent1 -x 120 -y 40 'hermes'\\\", timeout=10)\\n\\n# Wait for startup, then send a message\\nterminal(command=\\\"sleep 8 && tmux send-keys -t agent1 'Build a FastAPI auth service' Enter\\\",`

`timeout=15)\\n\\n# Read output\\nterminal(command=\\\"sleep 20 && tmux capture-pane -t agent1 -p\\\", timeout=5)\\n\\n# Send follow-up\\nterminal(command=\\\"tmux send-keys -t agent1 'Add rate limiting middleware' Enter\\\", timeout=5)\\n\\n# Exit\\nterminal(command=\\\"tmux send-keys -t agent1 '/exit' Enter && sleep 2 && tmux kill-session -t agent1\\\", timeout=10)\\n` \\n\\n### Multi-Agent Coordination\\n\\n `\\n# Agent A: backend\\nterminal(command=\\\"tmux new-session -d -s backend -x 120 -y 40 'hermes -w'\\\", timeout=10)\\nterminal(command=\\\"sleep 8 && tmux send-keys -t backend 'Build REST API for user management' Enter\\\", timeout=15)\\n\\n# Agent B: frontend\\nterminal(command=\\\"tmux new-session -d -s frontend -x 120 -y 40 'hermes -w'\\\", timeout=10)\\nterminal(command=\\\"sleep 8 && tmux send-keys -t frontend 'Build React dashboard for user management' Enter\\\", timeout=15)\\n\\n# Check progress, relay context between them\\nterminal(command=\\\"tmux capture-pane -t backend -p | tail -30\\\", timeout=5)\\nterminal(command=\\\"tmux send-keys -t frontend 'Here is the API schema from the backend agent: ...' Enter\\\", timeout=5)\\n` \\n\\n### Session Resume\\n\\n `\\n# Resume most recent session\\nterminal(command=\\\"tmux new-session -d -s resumed 'hermes --continue'\\\", timeout=10)\\n\\n# Resume specific session\\nterminal(command=\\\"tmux new-session -d -s resumed 'hermes --resume 20260225_143052_a1b2c3'\\\", timeout=10)\\n` \\n\\n### Tips\\n\\n- **Prefer `delegate_task` for quick subtasks** — less overhead than spawning a full process\\n- **Use `-w` (worktree mode)** when spawning agents that edit code — prevents git conflicts\\n- **Set timeouts** for one-shot mode — complex tasks can take 5-10 minutes\\n- **Use `hermes chat -q` for fire-and-forget** — no PTY needed\\n- **Use tmux for interactive sessions** — raw PTY mode has `\\\\r` vs `\\\\n` issues with prompt_toolkit\\n- **For scheduled tasks**, use the `cronjob` tool instead of spawning — handles delivery and retry\\n\\n---\\n\\n## Troubleshooting\\n\\n### Voice not working\\n1. Check `stt.enabled: true` in config.yaml\\n2. Verify provider: `pip install faster-whisper` or set API key\\n3. In gateway: `/restart`. In CLI: exit and relaunch.\\n\\n### Tool not available\\n1. `hermes tools` — check if toolset is enabled for your platform\\n2. Some tools need env vars (check `.env`)\\n3. `/reset` after enabling tools\\n\\n### Model/provider issues\\n1. `hermes doctor` — check config and dependencies\\n2. `hermes login` — re-authenticate OAuth providers\\n3. Check `.env` has the right API key\\n4. **Copilot 403**: `gh auth login` tokens do NOT work for Copilot API. You must use the Copilot-specific OAuth device code flow via `hermes model` → GitHub Copilot.\\n\\n### Changes not taking effect\\n- **Tools/skills:** `/reset` starts a new session with updated toolset\\n- **Config changes:** In gateway: `/restart`. In CLI: exit and relaunch.\\n- **Code changes:** Restart the CLI or gateway

process\\n\\n### Skills not showing\\n1. `hermes skills list` — verify installed\\n2. `hermes skills config` — check platform enablement\\n3. Load explicitly: `/skill name` or `hermes -s name` \\n\\n### Gateway issues\\nCheck logs first:\\n `bash\\ngrep -i \\\"failed to send\\\\|error\\\" ~/.hermes/logs/gateway.log | tail -20\\n` \\n\\nCommon gateway problems:\\n- **Gateway dies on SSH logout**: Enable linger: `sudo loginctl enable-linger $USER` \\n- **Gateway dies on WSL2 close**: WSL2 requires `systemd=true` in `/etc/wsl.conf` for systemd services to work. Without it, gateway falls back to `nohup` (dies when session closes).\\n- **Gateway crash loop**: Reset the failed state: `systemctl --user reset-failed hermes-gateway` \\n\\n### Platform-specific issues\\n- **Discord bot silent**: Must enable **Message Content Intent** in Bot → Privileged Gateway Intents.\\n- **Slack bot only works in DMs**: Must subscribe to `message.channels` event. Without it, the bot ignores public channels.\\n- **Windows HTTP 400 \\\"No models provided\\\"**: Config file encoding issue (BOM). Ensure `config.yaml` is saved as UTF-8 without BOM.\\n\\n### Auxiliary models not working\\nIf `auxiliary` tasks (vision, compression, session_search) fail silently, the `auto` provider can't find a backend. Either set `OPENROUTER_API_KEY` or `GOOGLE_API_KEY` , or explicitly configure each auxiliary task's provider:\\n `bash\\nhermes config set auxiliary.vision.provider <your_provider>\\nhermes config set auxiliary.vision.model <model_name>\\n` \\n\\n---\\n\\n## Where to Find Things\\n\\n| Looking for... | Location |\\n|---------------|----------|\\n| Config options | `hermes config edit` or Configuration docs |\\n| Available tools | `hermes tools list` or Tools reference |\\n| Slash commands | `/help` in session or Slash commands reference |\\n| Skills catalog | `hermes skills browse` or Skills catalog |\\n| Provider setup | `hermes model` or Providers guide |\\n| Platform setup | `hermes gateway setup` or Messaging docs |\\n| MCP servers | `hermes mcp list` or MCP guide |\\n| Profiles | `hermes profile list` or Profiles docs |\\n| Cron jobs | `hermes cron list` or Cron docs |\\n| Memory | `hermes memory status` or Memory docs |\\n| Env variables | `hermes config env-path` or Env vars reference |\\n| CLI commands | `hermes --help` or CLI reference |\\n| Gateway logs | `~/.hermes/logs/gateway.log` |\\n| Session files | `~/.hermes/sessions/` or `hermes sessions browse` |\\n| Source code | `~/.hermes/hermes-agent/` |\\n\\n---\\n\\n## Contributor Quick Reference\\n\\nFor occasional contributors and PR authors. Full developer docs: https://hermes-agent.nousresearch.com/docs/developer-guide/\\n\\n### Project Layout\\n\\n `\\nhermes-agent/\\n├── run_agent.py # AIAgent — core conversation loop\\n├── model_tools.py # Tool discovery and dispatch\\n├── toolsets.py # Toolset definitions\\n├── cli.py # Interactive CLI (HermesCLI)\\n├── hermes_state.py # SQLite session store\\n├── agent/ # Prompt builder, context compression, memory, model routing, credential pooling, skill dispatch\\n├── hermes_cli/ # CLI subcommands, config, setup, commands\\n│ ├── commands.py # Slash command registry`

`(CommandDef)\\n│   ├── config.py   # DEFAULT_CONFIG, env var definitions\\n│   └── main.py   # CLI entry point and argparse\\n├── tools/   # One file per tool\\n│   └── registry.py   # Central tool registry\\n├── gateway/   # Messaging gateway\\n│   └── platforms/   # Platform adapters (telegram, discord, etc.)\\n├── cron/   # Job scheduler\\n├── tests/   # ~3000 pytest tests\\n└── website/   # Docusaurus docs site\\n` \\n\\nConfig: `~/.hermes/config.yaml` (settings), `~/.hermes/.env` (API keys).\\n\\n### Adding a Tool (3 files)\\n\\n**1. Create `tools/your_tool.py`**:\\n `python\\nimport json, os\\nfrom tools.registry import registry\\n\\ndef check_requirements() -> bool:\\n   return bool(os.getenv(\\\"EXAMPLE_API_KEY\\\"))\\n\\ndef example_tool(param: str, task_id: str = None) -> str:\\n   return json.dumps({\\\"success\\\": True, \\\"data\\\": \\\"...\\\"})\\n\\nregistry.register(\\n   name=\\\"example_tool\\\",\\n   toolset=\\\"example\\\",\\n   schema={\\\"name\\\": \\\"example_tool\\\", \\\"description\\\": \\\"...\\\", \\\"parameters\\\": {...}},\\n   handler=lambda args, **kw: example_tool(\\n   param=args.get(\\\"param\\\", \\\"\\\"), task_id=kw.get(\\\"task_id\\\")),\\n   check_fn=check_requirements,\\n   requires_env=[\\\"EXAMPLE_API_KEY\\\"],\\n)\\n` \\n\\n**2. Add import** in `model_tools.py` → `_discover_tools()` list.\\n\\n**3. Add to `toolsets.py`** → `_HERMES_CORE_TOOLS` list.\\n\\nAll handlers must return JSON strings. Use `get_hermes_home()` for paths, never hardcode `~/.hermes`.\\n\\n### Adding a Slash Command\\n\\n1. Add `CommandDef` to `COMMAND_REGISTRY` in `hermes_cli/commands.py` \\n2. Add handler in `cli.py` → `process_command()` \\n3. (Optional) Add gateway handler in `gateway/run.py` \\n\\nAll consumers (help text, autocomplete, Telegram menu, Slack mapping) derive from the central registry automatically.\\n\\n### Agent Loop (High Level)\\n\\n `\\nrun_conversation():\\n 1. Build system prompt\\n 2. Loop while iterations < max:\\n   a. Call LLM (OpenAI-format messages + tool schemas)\\n   b. If tool_calls → dispatch each via handle_function_call() → append results → continue\\n   c. If text response → return\\n 3. Context compression triggers automatically near token limit\\n` \\n\\n### Testing\\n\\n `bash\\npython -m pytest tests/ -o 'addopts=' -q   # Full suite\\npython -m pytest tests/tools/ -q   # Specific area\\n` \\n\\n- Tests auto-redirect `HERMES_HOME` to temp dirs — never touch real `~/.hermes/` \\n- Run full suite before pushing any change\\n- Use `-o 'addopts='` to clear any baked-in pytest flags\\n\\n### Commit Conventions\\n\\n `\\ntype: concise subject line\\n\\nOptional`

`body.\\n` \\n\\nTypes: `fix:` , `feat:` , `refactor:` , `docs:` , `chore:` \\n\\n### Key Rules\\n\\n- **Never break prompt caching** — don't change context, tools, or system prompt mid-conversation\\n- **Message role alternation** — never two assistant or two user messages in a row\\n- Use `get_hermes_home()` from `hermes_constants` for all paths (profile-safe)\\n- Config values go in `config.yaml` , secrets go in `.env` \\n- New tools need a `check_fn` so they only appear when requirements are met\\n\", \"path\": \"autonomous-ai-agents/hermes-agent/SKILL.md\", \"linked_files\": null, \"usage_hint\": null, \"required_environment_variables\": [], \"required_commands\": [], \"missing_required_environment_variables\": [], \"missing_credential_files\": [], \"missing_required_commands\": [], \"setup_needed\": false, \"setup_skipped\": false, \"readiness_status\": \"available\", \"metadata\": {\"hermes\": {\"tags\": [\"hermes\", \"setup\", \"configuration\", \"multi-agent\", \"spawning\", \"cli\", \"gateway\", \"development\"], \"homepage\": \"https://github.com/NousResearch/hermes-agent\", \"related_skills\": [\"claude-code\", \"codex\", \"opencode\"]}}}",

/home/z/.hermes/sessions/session_20260414_205002_6cbc9a.json- },

/home/z/.hermes/sessions/session_20260414_205002_6cbc9a.json- {

/home/z/.hermes/sessions/session_20260414_205002_6cbc9a.json- "role": "assistant",

/home/z/.hermes/sessions/session_20260414_205002_6cbc9a.json: "content": "Hermes Agent 原生支持多Agent配置和部署，有三种主流的多Agent使用方案，官方文档里的相关说明整理如下：\n\n---\n\n### 🎯 方案1：Profiles 多独立Agent配置（官方推荐）\n每个Profile是**完全独立的Agent实例**，拥有隔离的配置文件、技能库、内存、会话记录、API密钥，适合划分不同用途的Agent（比如工作专属Agent/个人使用Agent/开发测试Agent）\n#### 常用操作命令：\n`bash\n# 查看所有已创建的Profile\nhermes profile list\n\n# 创建新的独立Profile（支持克隆已有配置）\nhermes profile create <profile名称>\n# 克隆现有配置创建新Profile\nhermes profile create <新名称> --clone-from <原有profile名>\n\n# 切换默认使用的Profile\nhermes profile use <profile名称>\n\n# 临时使用指定Profile启动会话\nhermes --profile <profile名称>\n` \n每个Profile的配置文件保存在 `~/.hermes/profiles/<名称>/` 目录下，完全独立互不影响。\n\n---\n\n### 🎯 方案2：`delegate_task` 子Agent并行任务\n适合在当前会话内快速创建多个子Agent**并行处理独立子任务**，轻量无需额外配置，子Agent拥有独立的会话和工具调用权限，执行完成后返回结果给主Agent：\n#### 支持两种模式：\n1. 单任务子Agent：指定目标、上下文、允许的工具集，子Agent独立完成后返回结果\n2. 批量并行子Agent：同时创建多个子Agent分别处理不同任务，全部完成后统一返回结果\n#### 配置选项：\n可以在 `config.yaml` 的 `delegation` 部分自定义子Agent的默认配置：\n`yaml\ndelegation:\n model: anthropic/claude-sonnet-4 # 子Agent默认使用的模型\n provider: openrouter # 子Agent默认使用的服务商\n max_iterations: 50 # 子Agent最多允许的工具调用轮次\n reasoning_effort: medium # 子Agent推理深

度\n\n---\n\n### 🎯 方案3：Spawn 独立Agent进程\n适合创建长期运行、完全独立的Agent实例（比如后台持续运行的任务Agent、专用开发Agent），支持tmux交互式管理：\n`bash\n# 创建后台运行的独立Agent1\ntmux new-session -d -s agent1 -x 120 -y 40 'hermes -w'\n# 给Agent1发送任务指令\ntmux send-keys -t agent1 '搭建FastAPI用户管理后端' Enter\n\n# 再创建独立的前端Agent2并行工作\ntmux new-session -d -s agent2 -x 120 -y 40 'hermes -w'\ntmux send-keys -t agent2 '搭建用户管理React前端面板' Enter\n\n# 查看Agent的运行输出\ntmux capture-pane -t agent1 -p\n`\n这类Agent进程完全独立，支持长期运行，甚至可以部署在不同的服务器上协作。\n\n---\n\n如果需要配置多Agent协作的具体场景，你可以告诉我你的使用需求，我可以给你对应的配置方案~",

/home/z/.hermes/sessions/session_20260414_205002_6cbc9a.json- "reasoning": "\n用户现在问的是文档里配置多个agent的相关内容，我刚加载了hermes-agent的技能文档，里面确实有相关的多agent配置和使用说明，我需要整理出来给用户。\n首先，先明确Hermes Agent原生支持多Agent部署，有两种主流的使用模式：\n1. 快速子Agent模式：用`delegate_task`工具，适合并行处理短期子任务，轻量不需要独立配置\n2. 完全独立多实例模式：通过Profiles或者直接Spawn独立Hermes进程，适合完全隔离的长期任务，完全独立的配置、技能、内存、会话\n然后要把具体的配置和使用方式说清楚：\n首先先说Profiles，这个是官方支持的多Agent配置方式，每个Profile是完全独立的环境，有自己的config、技能、内存、会话，适合不同场景用不同的Agent（比如工作用Agent、个人用Agent、开发用Agent），然后把相关的命令列出来：创建、切换、删除这些。\n然后说子Agent任务委托，用`delegate_task`，可以直接创建多个并行的子Agent处理任务，不需要单独配置，适合当前会话内的并行任务，把使用场景和参数也说下。\n然后说Spawn独立进程的方式，适合长期运行的独立Agent，比如后台跑的任务Agent，需要持久运行的那种，还有多Agent协作的例子。\n最后可以补充下多Agent的配置相关的参数，比如delegation部分的配置，可以指定子Agent用的模型、最大迭代次数这些。\n现在整理成清晰的结构，让用户容易理解。\n"

/home/z/.hermes/sessions/session_20260414_205002_6cbc9a.json- "content": "需要方案1的"

/home/z/.hermes/sessions/session_20260414_205002_6cbc9a.json- },

/home/z/.hermes/sessions/session_20260414_205002_6cbc9a.json- {

/home/z/.hermes/sessions/session_20260414_205002_6cbc9a.json- "role": "assistant",

/home/z/.hermes/sessions/session_20260414_205002_6cbc9a.json: "content": "✅ **Profiles多独立Agent配置完整操作指引**\n\n---\n\n### 🔹 第一步：创建新的独立Profile\n你可以创建任意多个完全隔离的Agent实例，比如创建一个叫「work-agent」的工作专属Agent：\n`bash\n# 全新创建空白Profile\nhermes profile create work-agent\n\n# 如果想基于当前默认配置克隆，不用重新配基础参数\nhermes profile create work-agent --clone-from default\n`\n默认的主Agent的Profile名称是`default`。\n\n---\n\n### 🔹 第二步：给新Profile配置专属参数\n切换到新创建的Profile，就可以给它单独配置所有参数，不会影响其他Agent：

\n`bash\n# 把work-agent设为当前默认Profile\nhermes profile use work-agent\n`\n之后所有配置操作都只会作用于这个独立的Agent：\n- 配置专属模型/API密钥：执行`hermes model`交互式选择，不同Profile可以用完全不同的模型服务商和密钥\n- 启用专属工具集：执行`hermes tools enable xxx`，比如工作Agent可以单独开启企业内部工具、邮件工具，开发Agent单独开启开发类工具\n- 安装专属技能：执行`hermes skills install xxx`，每个Profile的技能库完全独立，不会互相干扰\n- 自定义其他配置：内存开关、TTS/语音配置、安全规则、定时任务等，全部和其他Agent隔离配置。\n\n---\n\n### 🔹 第三步：使用独立Profile\n两种使用方式：\n1. **临时单次使用**：启动时指定Profile，不会修改默认配置\n`bash\n hermes --profile work-agent\n`\n2. **长期默认使用**：设置为默认Profile，之后每次输入`hermes`自动用这个Agent\n`bash\n hermes profile use work-agent\n`\n\n---\n\n### 📌 每个Profile完全隔离的内容\n不同Agent之间100%独立，不会有数据互通：\n✅ 独立的config.yaml配置（模型、API密钥、工具开关、自定义规则全分开）\n✅ 独立的技能库（安装的技能仅当前Profile可见，不会影响其他Agent）\n✅ 独立的持久化内存（用户偏好、环境记忆完全隔离，工作和个人的记忆不互通）\n✅ 独立的会话历史（不同Agent的聊天记录完全分开存储）\n✅ 独立的cron定时任务、webhook配置、授权凭证\n✅ 独立的日志和缓存目录\n\n---\n\n### 🎯 常见多Profile使用场景参考\n| Profile名称 | 用途 | 专属配置 |\n|---|---|---|\n| work-agent | 工作专用 | 对接企业内部工具、工作相关技能、公司API密钥、办公类工具集 |\n| dev-agent | 开发专用 | 启用全部开发工具集、代码相关技能、高性能编码模型、开发环境终端权限 |\n| personal-agent | 个人使用 | 智能家居控制、生活类技能、个人日程管理、内容生成工具 |\n| test-agent | 测试专用 | 测试新技能、新工具、新模型，搞坏了直接删除重建不影响主力Agent |\n\n---\n\n### 🔧 常用Profile管理命令\n`bash\n# 查看所有已创建的Profile，带*号的是当前默认Agent\nhermes profile list\n\n# 查看指定Profile的详细配置\nhermes profile show <profile名称>\n\n# 重命名Profile\nhermes profile rename <旧名称> <新名称>\n\n# 导出Profile备份（打包成tar.gz可迁移）\nhermes profile export <profile名称> -o ./my_profile_backup.tar.gz\n\n# 导入备份的Profile\nhermes profile import ./my_profile_backup.tar.gz\n\n# 删除不需要的Profile\nhermes profile delete <profile名称>\n`\n\n---\n\n### 💡 注意事项\n1. 切换Profile后需要重启当前会话（输入`/new`或者退出重进）才会生效\n2. 每个Profile的配置文件都保存在`~/.hermes/profiles/<名称>/`目录下，可以手动编辑`config.yaml`自定义高级配置\n3. 不同Profile可以单独配置终端权限、工作目录，在对应Profile的`config.yaml`的`terminal`部分设置即可\n\n现在需要帮你创建对应的Profile吗？或者你有具体的配置需求可以告诉我~",

/home/z/.hermes/sessions/session_20260414_205002_6cbc9a.json: "reasoning": "\n用户现在需要方案1也就是Profiles多独立Agent配置的具体操作指引对吧，首先我要一步步讲得清晰，从创建新Profile，到配置每个Profile的不同参数，还有日常使用的方法，还有常见的场景举例对吧？\n\n首先，先讲**创建新Profile的完整流程**，分几步：首先是创建命令，然后是配置这个新Profile的专属参数，比如模型、工具集、技能库这些，然后是怎么切换使用，对吧？\n\n然后要讲**每个Profile可以独立配置的内容**，比如不同Profile用不同的模型、不同的API密钥、启用不同的工具集、加载不同的技能、有独立的内存和会话记录，这些要讲清楚，让用户知道可以怎么自定义每个Agent。\n\n然后要给**实际使用场景示例**，比如用户可能需要一个工作专用的Profile，一个个人用的，一个开发测试用的，分别怎么配置，对吧？\n\n还要讲**常用的Profile管理命令**，比如怎么查看所有Profile，怎么删除不需

要的，怎么导出导入备份Profile这些。\n\n对了还要提一下怎么验证配置是不是生效了，还有切换Profile后怎么确认对吧？\n\n等下还要注意有没有什么注意事项，比如切换Profile后需要重启会话才能生效对吧？还有每个Profile的配置文件路径，方便用户手动改配置对吧？\n\n现在整理一下结构：\n\n首先✅ **Profiles 多Agent配置完整操作步骤**\n\n第一步：创建新的独立Profile\n首先给命令，比如创建一个叫「work-agent」的工作专用Agent：\nhermes profile create work-agent\n如果要基于现在的配置克隆的话就加--clone参数，这样不用重新配一遍基础内容：\nhermes profile create work-agent --clone-from default\n默认的Profile名字是default对吧？\n\n第二步：给新Profile配置专属参数\n切换到新的Profile：\nhermes profile use work-agent\n然后就可以像配置主Agent一样给这个单独的Profile配置参数了：\n- 配置专属模型/API密钥：hermes model 交互式选择，或者直接改配置文件\n- 启用专属工具集：hermes tools enable xxx 给这个Profile单独开工具\n- 安装专属技能：hermes skills install xxx 只有这个Profile能看到这些技能\n- 配置其他自定义参数：比如内存开关、TTS/STT配置、安全规则这些，都和主Agent配置方法一样，不会影响其他Profile\n\n然后第三步：使用独立Profile\n两种用法：\n1. 临时启动用这个Profile：hermes --profile work-agent\n2. 设为默认每次启动自动用：hermes profile use work-agent 之后直接输入hermes就用这个Profile\n\n然后📌 **每个Profile完全独立隔离的内容**：\n要列清楚，让用户知道隔离的是什么：\n✅ 独立的config.yaml配置（模型、API密钥、工具开关、自定义规则全分开）\n✅ 独立的技能库（~/.hermes/profiles/xxx/skills/，安装的技能不会互相影响）\n✅ 独立的内存记录（用户偏好、环境记忆完全分开，工作和个人的记忆不互通）\n✅ 独立的会话历史（不同Profile的聊天记录完全隔离）\n✅ 独立的cron定时任务、webhook配置、授权凭证\n✅ 独立的日志和缓存目录\n\n然后🎯 **常见多Profile使用场景示例**：\n可以给几个例子，用户可以直接套用：\n1. 「work-agent」工作专属Profile：\n - 配置公司内网权限、企业工具集、工作相关技能（比如公司内部文档解析、汇报PPT生成、项目管理工具对接）\n - 用企业专属模型/API密钥，工作记忆和个人完全分开\n2. 「dev-agent」开发专属Profile：\n - 启用全部开发工具集、安装代码相关技能、配置开发环境的终端权限\n - 用高性能编码模型，会话记录全是开发相关内容\n3. 「personal-agent」个人使用Profile：\n - 配置生活相关技能、智能家居控制、个人日程管理、内容生成工具\n - 独立的个人记忆，和工作内容完全隔离\n4. 「test-agent」测试专用Profile：\n - 测试新技能、新工具、新模型的时候用，搞坏了直接删掉重建就行，不会影响主力Agent的配置\n\n然后🔧 **常用Profile管理命令**：\n把常用的命令列出来方便用户查：\n`bash\n# 查看所有已创建的Profile，带*的是当前默认\nhermes profile list\n\n# 切换默认Profile\nhermes profile use <profile名称>\n\n# 查看指定Profile的详细配置\nhermes profile show <profile名称>\n\n# 重命名Profile\nhermes profile rename <旧名称> <新名称>\n\n# 导出Profile做备份（会打包成tar.gz）\nhermes profile export <profile名称> -o ./xxx_profile_backup.tar.gz\n\n# 导入备份的Profile\nhermes profile import ./xxx_profile_backup.tar.gz\n\n# 删除不需要的Profile\nhermes profile delete <profile名称>\n`\n\n然后💡 **注意事项**：\n1. 切换Profile后，需要重启当前会话（输入/new或者退出重进hermes）才会生效\n2. 每个Profile的配置文件都保存在`~/.hermes/profiles/<名称>/`目录下，可以手动编辑config.yaml自定义高级配置\n3. 如果需要给不同Profile配置不同的终端运行权限/工作目录，可以在每个Profile的config.yaml的terminal部分单独设置cwd、backend等参数\n\n最后可以问用户需不需要帮他现在就创建对应的Profile，或者有没有具体的配置需求对吧？"

/home/z/.hermes/sessions/session_20260415_091111_cbc08e.json: "content": "[SYSTEM: The user has invoked the \"hermes-agent\" skill, indicating they want you to follow its instructions. The full skill content is loaded below.]\n\n---\nname: hermes-agent\ndescription: Complete guide to using and extending Hermes Agent — CLI usage, setup, configuration, spawning additional agents, gateway platforms, skills, voice, tools, profiles, and a concise contributor reference. Load this skill when helping users configure Hermes, troubleshoot issues, spawn agent instances, or make code contributions.\nversion: 2.0.0\nauthor: Hermes Agent + Teknium\nlicense: MIT\nmetadata:\n hermes:\n   tags: [hermes, setup, configuration, multi-agent, spawning, cli, gateway, development]\n   homepage: https://github.com/NousResearch/hermes-agent\n   related_skills: [claude-code, codex, opencode]\n---\n\n# Hermes Agent\n\nHermes Agent is an open-source AI agent framework by Nous Research that runs in your terminal, messaging platforms, and IDEs. It belongs to the same category as Claude Code (Anthropic), Codex (OpenAI), and OpenClaw — autonomous coding and task-execution agents that use tool calling to interact with your system. Hermes works with any LLM provider (OpenRouter, Anthropic, OpenAI, DeepSeek, local models, and 15+ others) and

runs on Linux, macOS, and WSL.\n\nWhat makes Hermes different:\n\n- **Self-improving through skills** — Hermes learns from experience by saving reusable procedures as skills. When it solves a complex problem, discovers a workflow, or gets corrected, it can persist that knowledge as a skill document that loads into future sessions. Skills accumulate over time, making the agent better at your specific tasks and environment.\n- **Persistent memory across sessions** — remembers who you are, your preferences, environment details, and lessons learned. Pluggable memory backends (built-in, Honcho, Mem0, and more) let you choose how memory works.\n- **Multi-platform gateway** — the same agent runs on Telegram, Discord, Slack, WhatsApp, Signal, Matrix, Email, and 10+ other platforms with full tool access, not just chat.\n- **Provider-agnostic** — swap models and providers mid-workflow without changing anything else. Credential pools rotate across multiple API keys automatically.\n- **Profiles** — run multiple independent Hermes instances with isolated configs, sessions, skills, and memory.\n- **Extensible** — plugins, MCP servers, custom tools, webhook triggers, cron scheduling, and the full Python ecosystem.\n\nPeople use Hermes for software development, research, system administration, data analysis, content creation, home automation, and anything else that benefits from an AI agent with persistent context and full system access.\n\n**This skill helps you work with Hermes Agent effectively** — setting it up, configuring features, spawning additional agent instances, troubleshooting issues, finding the right commands and settings, and understanding how the system works when you need to extend or contribute to it.\n\n**Docs:** https://hermes-agent.nousresearch.com/docs/\n\n## Quick Start\n\n`bash\n# Install\ncurl -fsSL https://raw.githubusercontent.com/NousResearch/hermes-agent/main/scripts/install.sh | bash\n\n# Interactive chat (default)\nhermes\n\n# Single query\nhermes chat -q \"What is the capital of France?\"\n\n# Setup wizard\nhermes setup\n\n# Change model/provider\nhermes model\n\n# Check health\nhermes doctor\n`\n\n---\n\n## CLI Reference\n\n### Global Flags\n\n`\nhermes [flags] [command]\n\n --version, -V   Show version\n --resume, -r SESSION   Resume session by ID or title\n --continue, -c [NAME]   Resume by name, or most recent session\n --worktree, -w   Isolated git worktree mode (parallel agents)\n --skills, -s SKILL   Preload skills (comma-separate or repeat)\n --profile, -p NAME   Use a named profile\n --yolo   Skip dangerous command approval\n --pass-session-id   Include session ID in system prompt\n`\n\nNo subcommand defaults to `chat`.\n\n### Chat\n\n`\nhermes chat [flags]\n -q, --query TEXT   Single query, non-interactive\n -m, --model MODEL   Model (e.g. anthropic/claude-sonnet-4)\n -t, --toolsets LIST   Comma-separated toolsets\n --provider PROVIDER   Force provider (openrouter, anthropic, nous, etc.)\n -v, --verbose   Verbose output\n -Q, --quiet   Suppress banner, spinner, tool previews\n --checkpoints

`default`, `provider`, `base_url`, `api_key`, `context_length` |\n| `agent` | `max_turns` (90), `tool_use_enforcement` |\n| `terminal` | `backend` (local/docker/ssh/modal), `cwd`, `timeout` (180) |\n| `compression` | `enabled`, `threshold` (0.50), `target_ratio` (0.20) |\n| `display` | `skin`, `tool_progress`, `show_reasoning`, `show_cost` |\n| `stt` | `enabled`, `provider` (local/groq/openai/mistral) |\n| `tts` | `provider` (edge/elevenlabs/openai/minimax/mistral/neutts) |\n| `memory` | `memory_enabled`, `user_profile_enabled`, `provider` |\n| `security` | `tirith_enabled`, `website_blocklist` |\n| `delegation` | `model`, `provider`, `base_url`, `api_key`, `max_iterations` (50), `reasoning_effort` |\n| `smart_model_routing` | `enabled`, `cheap_model` |\n| `checkpoints` | `enabled`, `max_snapshots` (50) |\n\nFull config reference: https://hermes-agent.nousresearch.com/docs/user-guide/configuration\n\n### Providers\n\n20+ providers supported. Set via `hermes model` or `hermes setup`.\n\n| Provider | Auth | Key env var |\n|---------|---|---|\n| OpenRouter | API key | `OPENROUTER_API_KEY` |\n| Anthropic | API key | `ANTHROPIC_API_KEY` |\n| Nous Portal | OAuth | `hermes login --provider nous` |\n| OpenAI Codex | OAuth | `hermes login --provider openai-codex` |\n| GitHub Copilot | Token | `COPILOT_GITHUB_TOKEN` |\n| Google Gemini | API key | `GOOGLE_API_KEY` or `GEMINI_API_KEY` |\n| DeepSeek | API key | `DEEPSEEK_API_KEY` |\n| xAI / Grok | API key | `XAI_API_KEY` |\n| Hugging Face | Token | `HF_TOKEN` |\n| Z.AI / GLM | API key | `GLM_API_KEY` |\n| MiniMax | API key | `MINIMAX_API_KEY` |\n| MiniMax CN | API key | `MINIMAX_CN_API_KEY` |\n| Kimi / Moonshot | API key | `KIMI_API_KEY` |\n| Alibaba / DashScope | API key | `DASHSCOPE_API_KEY` |\n| Xiaomi MiMo | API key | `XIAOMI_API_KEY` |\n| Kilo Code | API key | `KILOCODE_API_KEY` |\n| AI Gateway (Vercel) | API key | `AI_GATEWAY_API_KEY` |\n| OpenCode Zen | API key | `OPENCODE_ZEN_API_KEY` |\n| OpenCode Go | API key | `OPENCODE_GO_API_KEY` |\n| Qwen OAuth | OAuth | `hermes login --provider qwen-oauth` |\n| Custom endpoint | Config | `model.base_url` + `model.api_key` in config.yaml |\n| GitHub Copilot ACP | External | `COPILOT_CLI_PATH` or Copilot CLI |\n\nFull provider docs: https://hermes-agent.nousresearch.com/docs/integrations/providers\n\n### Toolsets\n\nEnable/disable via `hermes tools` (interactive) or `hermes tools enable/disable NAME`.\n\n| Toolset | What it provides |\n|---------|---|\n| `web` | Web search and content extraction |\n| `browser` | Browser automation (Browserbase, Camofox, or local Chromium) |\n| `terminal` | Shell commands and process management |\n| `file` | File read/write/search/patch |\n| `code_execution` | Sandboxed Python execution |\n| `vision` | Image analysis |\n| `image_gen` | AI image generation |\n| `tts` | Text-to-speech |\n| `skills` | Skill browsing and management |\n| `memory` | Persistent cross-session memory |\n| `session_search` | Search past conversations |\n| `delegation` | Subagent task delegation |\n| `cronjob` | Scheduled task management |\n| `clarify` | Ask user clarifying questions |\n| `messaging` | Cross-platform message sending |\n| `search` | Web search only (subset of `web`) |\n| `todo` | In-session task planning and tracking |\n| `rl` | Reinforcement learning tools (off by default) |\n

`moa` | Mixture of Agents (off by default) |\n| `homeassistant` | Smart home control (off by default) |\n\nTool changes take effect on `/reset` (new session). They do NOT apply mid-conversation to preserve prompt caching.\n\n---\n\n## Voice & Transcription\n\n### STT (Voice → Text)\n\nVoice messages from messaging platforms are auto-transcribed.\n\nProvider priority (auto-detected):\n1. **Local faster-whisper** — free, no API key: `pip install faster-whisper` \n2. **Groq Whisper** — free tier: set `GROQ_API_KEY` \n3. **OpenAI Whisper** — paid: set `VOICE_TOOLS_OPENAI_KEY` \n4. **Mistral Voxtral** — set `MISTRAL_API_KEY` \n\nConfig:\n `yaml\nstt:\n  enabled: true\n  provider: local        # local, groq, openai, mistral\n  local:\n    model: base         # tiny, base, small, medium, large-v3\n` \n\n### TTS (Text → Voice)\n\n| Provider | Env var | Free? |\n|---------|---------|-------|\n| Edge TTS | None | Yes (default) |\n| ElevenLabs | `ELEVENLABS_API_KEY` | Free tier |\n| OpenAI | `VOICE_TOOLS_OPENAI_KEY` | Paid |\n| MiniMax | `MINIMAX_API_KEY` | Paid |\n| Mistral (Voxtral) | `MISTRAL_API_KEY` | Paid |\n| NeuTTS (local) | None (`pip install neutts[all]` + `espeak-ng`) | Free |\n\nVoice commands: `/voice on` (voice-to-voice), `/voice tts` (always voice), `/voice off`.\n\n---\n\n## Spawning Additional Hermes Instances\n\nRun additional Hermes processes as fully independent subprocesses — separate sessions, tools, and environments.\n\n### When to Use This vs delegate_task\n\n| | `delegate_task` | Spawning `hermes` process |\n|-|----------------|---------------------------|\n| Isolation | Separate conversation, shared process | Fully independent process |\n| Duration | Minutes (bounded by parent loop) | Hours/days |\n| Tool access | Subset of parent's tools | Full tool access |\n| Interactive | No | Yes (PTY mode) |\n| Use case | Quick parallel subtasks | Long autonomous missions |\n\n### One-Shot Mode\n\n `\nterminal(command=\"hermes chat -q 'Research GRPO papers and write summary to ~/research/grpo.md'\", timeout=300)\n\n# Background for long tasks:\nterminal(command=\"hermes chat -q 'Set up CI/CD for ~/myapp'\", background=true)\n` \n\n### Interactive PTY Mode (via tmux)\n\nHermes uses prompt_toolkit, which requires a real terminal. Use tmux for interactive spawning:\n\n `\n# Start\nterminal(command=\"tmux new-session -d -s agent1 -x 120 -y 40 'hermes'\", timeout=10)\n\n# Wait for startup, then send a message\nterminal(command=\"sleep 8 && tmux send-keys -t agent1 'Build a FastAPI auth service' Enter\", timeout=15)\n\n# Read output\nterminal(command=\"sleep 20 && tmux capture-pane -t agent1 -p\", timeout=5)\n\n# Send follow-up\nterminal(command=\"tmux send-keys -t agent1 'Add rate limiting middleware' Enter\", timeout=5)\n\n# Exit\nterminal(command=\"tmux send-keys -t agent1 '/exit' Enter && sleep 2 && tmux kill-session -t agent1\", timeout=10)\n` \n\n### Multi-Agent Coordination\n\n `\n# Agent A: backend\nterminal(command=\"tmux new-session -d -s backend -x 120 -y 40 'hermes -w'\", timeout=10)\nterminal(command=\"sleep 8 && tmux send-keys -t backend

'Build REST API for user management' Enter\", timeout=15)\n\n# Agent B: frontend\nterminal(command=\"tmux new-session -d -s frontend -x 120 -y 40 'hermes -w'\", timeout=10)\nterminal(command=\"sleep 8 && tmux send-keys -t frontend 'Build React dashboard for user management' Enter\", timeout=15)\n\n# Check progress, relay context between them\nterminal(command=\"tmux capture-pane -t backend -p | tail -30\", timeout=5)\nterminal(command=\"tmux send-keys -t frontend 'Here is the API schema from the backend agent: ...' Enter\", timeout=5)\n \n\n### Session Resume\n\n \n# Resume most recent session\nterminal(command=\"tmux new-session -d -s resumed 'hermes --continue'\", timeout=10)\n\n# Resume specific session\nterminal(command=\"tmux new-session -d -s resumed 'hermes --resume 20260225_143052_a1b2c3'\", timeout=10)\n \n\n### Tips\n\n- **Prefer `delegate_task` for quick subtasks** — less overhead than spawning a full process\n- **Use `-w` (worktree mode)** when spawning agents that edit code — prevents git conflicts\n- **Set timeouts** for one-shot mode — complex tasks can take 5-10 minutes\n- **Use `hermes chat -q` for fire-and-forget** — no PTY needed\n- **Use tmux for interactive sessions** — raw PTY mode has `\\r` vs `\\n` issues with prompt_toolkit\n- **For scheduled tasks**, use the `cronjob` tool instead of spawning — handles delivery and retry\n\n---\n\n## Troubleshooting\n\n### Voice not working\n1. Check `stt.enabled: true` in config.yaml\n2. Verify provider: `pip install faster-whisper` or set API key\n3. In gateway: `/restart`. In CLI: exit and relaunch.\n\n### Tool not available\n1. `hermes tools` — check if toolset is enabled for your platform\n2. Some tools need env vars (check `.env`)\n3. `/reset` after enabling tools\n\n### Model/provider issues\n1. `hermes doctor` — check config and dependencies\n2. `hermes login` — re-authenticate OAuth providers\n3. Check `.env` has the right API key\n4. **Copilot 403**: `gh auth login` tokens do NOT work for Copilot API. You must use the Copilot-specific OAuth device code flow via `hermes model` → GitHub Copilot.\n\n### Changes not taking effect\n- **Tools/skills:** `/reset` starts a new session with updated toolset\n- **Config changes:** In gateway: `/restart`. In CLI: exit and relaunch.\n- **Code changes:** Restart the CLI or gateway process\n\n### Skills not showing\n1. `hermes skills list` — verify installed\n2. `hermes skills config` — check platform enablement\n3. Load explicitly: `/skill name` or `hermes -s name` \n\n### Gateway issues\nCheck logs first:\n `bash\ngrep -i \"failed to send\\|error\" ~/.hermes/logs/gateway.log | tail -20\n \n\nCommon gateway problems:\n- **Gateway dies on SSH logout**: Enable linger: `sudo loginctl enable-linger $USER` \n- **Gateway dies on WSL2 close**: WSL2 requires `systemd=true` in `/etc/wsl.conf` for systemd services to work. Without it, gateway falls back to `nohup` (dies when session closes).\n- **Gateway crash loop**: Reset the failed state: `systemctl --user reset-failed hermes-gateway` \n\n### Platform-specific issues\n- **Discord bot silent**: Must enable **Message Content Intent** in Bot → Privileged Gateway Intents.\n- **Slack bot only works in DMs**: Must subscribe to `message.channels` event.

Without it, the bot ignores public channels.\n- **Windows HTTP 400 \"No models provided\"**: Config file encoding issue (BOM). Ensure `config.yaml` is saved as UTF-8 without BOM.\n\n### Auxiliary models not working\nIf `auxiliary` tasks (vision, compression, session_search) fail silently, the `auto` provider can't find a backend. Either set `OPENROUTER_API_KEY` or `GOOGLE_API_KEY`, or explicitly configure each auxiliary task's provider:\n `bash\nhermes config set auxiliary.vision.provider <your_provider>\nhermes config set auxiliary.vision.model <model_name>\n` \n\n---\n\n## Where to Find Things\n\n| Looking for... | Location |\n|----------|----------|\n| Config options | `hermes config edit` or Configuration docs |\n| Available tools | `hermes tools list` or Tools reference |\n| Slash commands | `/help` in session or Slash commands reference |\n| Skills catalog | `hermes skills browse` or Skills catalog |\n| Provider setup | `hermes model` or Providers guide |\n| Platform setup | `hermes gateway setup` or Messaging docs |\n| MCP servers | `hermes mcp list` or MCP guide |\n| Profiles | `hermes profile list` or Profiles docs |\n| Cron jobs | `hermes cron list` or Cron docs |\n| Memory | `hermes memory status` or Memory docs |\n| Env variables | `hermes config env-path` or Env vars reference |\n| CLI commands | `hermes --help` or CLI reference |\n| Gateway logs | `~/.hermes/logs/gateway.log` |\n| Session files | `~/.hermes/sessions/` or `hermes sessions browse` |\n| Source code | `~/.hermes/hermes-agent/` |\n\n---\n\n## Contributor Quick Reference\n\nFor occasional contributors and PR authors. Full developer docs: https://hermes-agent.nousresearch.com/docs/developer-guide/\n\n### Project Layout\n\n `\nhermes-agent/\n├── run_agent.py   # AIAgent — core conversation loop\n├── model_tools.py   # Tool discovery and dispatch\n├── toolsets.py   # Toolset definitions\n├── cli.py   # Interactive CLI (HermesCLI)\n├── hermes_state.py   # SQLite session store\n├── agent/   # Prompt builder, context compression, memory, model routing, credential pooling, skill dispatch\n├── hermes_cli/   # CLI subcommands, config, setup, commands\n│   ├── commands.py   # Slash command registry (CommandDef)\n│   ├── config.py   # DEFAULT_CONFIG, env var definitions\n│   └── main.py   # CLI entry point and argparse\n├── tools/   # One file per tool\n│   └── registry.py   # Central tool registry\n├── gateway/   # Messaging gateway\n│   └── platforms/   # Platform adapters (telegram, discord, etc.)\n├── cron/   # Job scheduler\n├── tests/   # ~3000 pytest tests\n└── website/   # Docusaurus docs site\n` \n\nConfig: `~/.hermes/config.yaml` (settings), `~/.hermes/.env` (API keys).\n\n### Adding a Tool (3 files)\n\n**1. Create `tools/your_tool.py`**:\n `python\nimport json, os\nfrom tools.registry import registry\n\ndef check_requirements() -> bool:\n`

` return bool(os.getenv(\"EXAMPLE_API_KEY\"))\n\ndef example_tool(param: str, task_id: str = None) -> str:\n   return json.dumps({\"success\": True, \"data\": \"...\"})\n\nregistry.register(\n   name=\"example_tool\",\n   toolset=\"example\",\n   schema={\"name\": \"example_tool\", \"description\": \"...\", \"parameters\": {...}},\n   handler=lambda args, **kw: example_tool(\n   param=args.get(\"param\", \"\"), task_id=kw.get(\"task_id\")),\n   check_fn=check_requirements,\n   requires_env=[\"EXAMPLE_API_KEY\"],\n)\n` \n\n**2. Add import** in `model_tools.py` → `_discover_tools()` list.\n\n**3. Add to `toolsets.py`** → `_HERMES_CORE_TOOLS` list.\n\nAll handlers must return JSON strings. Use `get_hermes_home()` for paths, never hardcode `~/.hermes`.\n\n### Adding a Slash Command\n\n1. Add `CommandDef` to `COMMAND_REGISTRY` in `hermes_cli/commands.py`\n2. Add handler in `cli.py` → `process_command()`\n3. (Optional) Add gateway handler in `gateway/run.py`\n\nAll consumers (help text, autocomplete, Telegram menu, Slack mapping) derive from the central registry automatically.\n\n### Agent Loop (High Level)\n\n`\nrun_conversation():\n 1. Build system prompt\n 2. Loop while iterations < max:\n   a. Call LLM (OpenAI-format messages + tool schemas)\n   b. If tool_calls → dispatch each via handle_function_call() → append results → continue\n   c. If text response → return\n 3. Context compression triggers automatically near token limit\n` \n\n### Testing\n\n`bash\npython -m pytest tests/ -o 'addopts=' -q   # Full suite\npython -m pytest tests/tools/ -q   # Specific area\n` \n\n- Tests auto-redirect `HERMES_HOME` to temp dirs — never touch real `~/.hermes/`\n- Run full suite before pushing any change\n- Use `-o 'addopts='` to clear any baked-in pytest flags\n\n### Commit Conventions\n\n`\ntype: concise subject line\n\nOptional body.\n` \n\nTypes: `fix:`, `feat:`, `refactor:`, `docs:`, `chore:`\n\n### Key Rules\n\n- **Never break prompt caching** — don't change context, tools, or system prompt mid-conversation\n- **Message role alternation** — never two assistant or two user messages in a row\n- Use `get_hermes_home()` from `hermes_constants` for all paths (profile-safe)\n- Config values go in `config.yaml`, secrets go in `.env`\n- New tools need a `check_fn` so they only appear when requirements are met"

/home/z/.hermes/sessions/session_20260415_091111_cbc08e.json- },

/home/z/.hermes/sessions/session_20260415_091111_cbc08e.json- {

{

/home/z/.hermes/sessions/session_20260414_205002_6cbc9a.json- "role": "assistant",

/home/z/.hermes/sessions/session_20260414_205002_6cbc9a.json: "content": "Hermes Agent 原生支持多Agent配置和部署，有三种主流的多Agent使用方案，官方文档里的相关说明整理如下：\n\n---\n\n### 🎯 方案1：Profiles 多独立Agent配置（官方推荐）\n每个Profile是**完全独立的Agent实例**，拥有隔离的配置文件、技能库、内存、会话记录、API密钥，适合划分不同用途的Agent（比如工作专属Agent/个人使用Agent/开发测试Agent）\n#### 常用操作命令：\n`bash\n# 查看所有已创建的Profile\nhermes profile list\n\n# 创建新的独立Profile（支持克隆已有配置）\nhermes profile create <profile名称>\n# 克隆现有配置创建新Profile\nhermes profile create <新名称> --clone-from <原有profile名>\n\n# 切换默认使用的Profile\nhermes profile use <profile名称>\n\n# 临时使用指定Profile启动会话\nhermes --profile <profile名称>\n`\n每个Profile的配置文件保存在`~/.hermes/profiles/<名称>/`目录下，完全独立互不影响。\n\n---\n\n### 🎯 方案2：`delegate_task` 子Agent并行任务\n适合在当前会话内快速创建多个子Agent**并行处理独立子任务**，轻量无需额外配置，子Agent拥有独立的会话和工具调用权限，执行完成后返回结果给主Agent：

\n#### 支持两种模式：\n1. 单任务子Agent：指定目标、上下文、允许的工具集，子Agent独立完成后返回结果\n2. 批量并行子Agent：同时创建多个子Agent分别处理不同任务，全部完成后统一返回结果\n#### 配置选项：\n可以在 `config.yaml` 的 `delegation` 部分自定义子Agent的默认配置：\n `yaml\ndelegation:\n  model: anthropic/claude-sonnet-4 # 子Agent默认使用的模型\n  provider: openrouter # 子Agent默认使用的服务商\n  max_iterations: 50 # 子Agent最多允许的工具调用轮次\n  reasoning_effort: medium # 子Agent推理深度\n` \n\n---\n\n### 🎯 方案3：Spawn 独立Agent进程\n适合创建长期运行、完全独立的Agent实例（比如后台持续运行的任务Agent、专用开发Agent），支持tmux交互式管理：\n `bash\n# 创建后台运行的独立Agent1\ntmux new-session -d -s agent1 -x 120 -y 40 'hermes -w'\n# 给Agent1发送任务指令\ntmux send-keys -t agent1 '搭建FastAPI用户管理后端' Enter\n\n# 再创建独立的前端Agent2并行工作\ntmux new-session -d -s agent2 -x 120 -y 40 'hermes -w'\ntmux send-keys -t agent2 '搭建用户管理React前端面板' Enter\n\n# 查看Agent的运行输出\ntmux capture-pane -t agent1 -p\n` \n这类Agent进程完全独立，支持长期运行，甚至可以部署在不同的服务器上协作。\n\n---\n\n如果需要配置多Agent协作的具体场景，你可以告诉我你的使用需求，我可以给你对应的配置方案~",

/home/z/.hermes/sessions/session_20260414_205002_6cbc9a.json- "reasoning": "\n用户现在问的是文档里配置多个agent的相关内容，我刚加载了hermes-agent的技能文档，里面确实有相关的多agent配置和使用说明，我需要整理出来给用户。\n首先，先明确Hermes Agent原生支持多Agent部署，有两种主流的使用模式：\n1. 快速子Agent模式：用 `delegate_task` 工具，适合并行处理短期子任务，轻量不需要独立配置\n2. 完全独立多实例模式：通过Profiles或者直接Spawn独立Hermes进程，适合完全隔离的长期任务，完全独立的配置、技能、内存、会话\n然后要把具体的配置和使用方式说清楚：\n首先先说Profiles，这个是官方支持的多Agent配置方式，每个Profile是完全独立的环境，有自己的config、技能、内存、会话，适合不同场景用不同的Agent（比如工作用Agent、个人用Agent、开发用Agent），然后把相关的命令列出来：创建、切换、删除这些。\n然后说子Agent任务委托，用 `delegate_task` ，可以直接创建多个并行的子Agent处理任务，不需要单独配置，适合当前会话内的并行任务，把使用场景和参数也说下。\n然后说Spawn独立进程的方式，适合长期运行的独立Agent，比如后台跑的任务Agent，需要持久运行的那种，还有多Agent协作的例子。\n最后可以补充下多Agent的配置相关的参数，比如delegation部分的配置，可以指定子Agent用的模型、最大迭代次数这些。\n现在整理成清晰的结构，让用户容易理解。\n"

/home/z/.hermes/sessions/session_20260414_205002_6cbc9a.json- "role": "assistant",

/home/z/.hermes/sessions/session_20260414_205002_6cbc9a.json: "content": "✅ **Profiles多独立Agent配置完整操作指引**\n\n---\n\n### 🔹 第一步：创建新的独立Profile\n你可以创建任意多个完全隔离的Agent实例，比如创建一个叫「work-agent」的工作专属Agent：\n`bash\n# 全新创建空白Profile\nhermes profile create work-agent\n\n# 如果想基于当前默认配置克隆，不用重新配基础参数\nhermes profile create work-agent --clone-from default\n`\n默认的主Agent的Profile名称是 `default`。\n\n---\n\n### 🔹 第二步：给新Profile配置专属参数\n切换到新创建的Profile，就可以给它单独配置所有参数，不会影响其他Agent：\n`bash\n# 把work-agent设为当前默认Profile\nhermes profile use work-agent\n`\n之后所有配置操作都只会作用于这个独立的Agent：\n- 配置专属模型/API密钥：执行 `hermes model` 交互式选择，不同Profile可以用完全不同的模型服务商和密钥\n- 启用专属工具集：执行 `hermes tools enable xxx`，比如工作Agent可以单独开启企业内部工具、邮件工具，开发Agent单独开启开发类工具\n- 安装专属技能：执行 `hermes skills install xxx`，每个Profile的技能库完全独立，不会互相干扰\n- 自定义其他配置：内存开关、TTS/语音配置、安全规则、定时任务等，全部和其他Agent隔离配置。\n\n---\n\n### 🔹 第三步：使用独立Profile\n两种使用方式：\n1. **临时单次使用**：启动时指定Profile，不会修改默认配置\n`bash\n hermes --profile work-agent\n`\n2. **长期默认使用**：设置为默认Profile，之后每次输入 `hermes` 自动用这个Agent\n`bash\n hermes profile use work-agent\n`\n\n---\n\n### 📌 每个Profile完全隔离的内容\n不同Agent之间100%独立，不会有数据互通：\n✅ 独立的config.yaml配置（模型、API密钥、工具开关、自定义规则全分开）\n✅ 独立的技能库（安装的技能仅当前Profile可见，不会影响其他Agent）\n✅ 独立的持久化内存（用户偏好、环境记忆完全隔离，工作和个人的记忆不互通）\n✅ 独立的会话历史（不同Agent的聊天记录完全分开存储）\n✅ 独立的cron定时任务、webhook配置、授权凭证\n✅ 独立的日志和缓存目录\n\n---\n\n### 🎯 常见多Profile使用场景参考\n| Profile名称 | 用途 | 专属配置 |\n|---------|---|---|---|\n| work-agent | 工作专用 | 对接企业内部工具、工作相关技能、公司API密钥、办公类工具集 |\n| dev-agent | 开发专用 | 启用全部开发工具集、代码相关技能、高性能编码模型、开发环境终端权限 |\n| personal-agent | 个人使用 | 智能家居控制、生活类技能、个人日程管理、内容生成工具 |\n| test-agent | 测试专用 | 测试新技能、新工具、新模型，搞坏了直接删除重建不影响主力Agent |\n\n---\n\n### 🔧 常用Profile管理命令\n`bash\n# 查看所有已创建的Profile，带*号的是当前默认Agent\nhermes profile list\n\n# 查看指定Profile的详细配置\nhermes profile show <profile名称>\n\n# 重命名Profile\nhermes profile rename <旧名称> <新名称>\n\n# 导出Profile备份（打包成tar.gz可迁移）\nhermes profile export <profile名称> -o ./my_profile_backup.tar.gz\n\n# 导入备份的Profile\nhermes profile import ./my_profile_backup.tar.gz\n\n# 删除不需要的Profile\nhermes profile delete <profile名称>\n`\n\n---\n\n### 💡 注意事项\n1. 切换Profile后需要重启当前会话（输入 `/new` 或者退出重进）才会生效\n2. 每个Profile的配置文件都保存在 `~/.hermes/profiles/<名称>/` 目录下，可以手动编辑 `config.yaml` 自定义高级配置\n3. 不同Profile可以单独配置终端权限、工作目录，在对应Profile的 `config.yaml` 的 `terminal` 部分设置即可\n\n现在需要帮你创建对应的Profile吗？或者你有具体的配置需求可以告诉我~",

/home/z/.hermes/sessions/session_20260414_205002_6cbc9a.json: "reasoning": "\n用户现在需要方案1也就是Profiles多独立Agent配置的具体操作指引对吧，首先我要一步步讲得清晰，从创建新

Profile，到配置每个Profile的不同参数，还有日常使用的方法，还有常见的场景举例对吧？\n\n首先，先讲**创建新Profile的完整流程**，分几步：首先是创建命令，然后是配置这个新Profile的专属参数，比如模型、工具集、技能库这些，然后是怎么切换使用，对吧？\n\n然后要讲**每个Profile可以独立配置的内容**，比如不同Profile用不同的模型、不同的API密钥、启用不同的工具集、加载不同的技能、有独立的内存和会话记录，这些要讲清楚，让用户知道可以怎么自定义每个Agent。\n\n然后要给**实际使用场景示例**，比如用户可能需要一个工作专用的Profile，一个个人用的，一个开发测试用的，分别怎么配置，对吧？\n\n还要讲**常用的Profile管理命令**，比如怎么查看所有Profile，怎么删除不需要的，怎么导出导入备份Profile这些。\n\n对了还要提一下怎么验证配置是不是生效了，还有切换Profile后怎么确认对吧？\n\n等下还要注意有没有什么注意事项，比如切换Profile后需要重启会话才能生效对吧？还有每个Profile的配置文件路径，方便用户手动改配置对吧？\n\n现在整理一下结构：\n\n首先✅ **Profiles 多Agent配置完整操作步骤**\n\n第一步：创建新的独立Profile\n首先给命令，比如创建一个叫「work-agent」的工作专用Agent：\nhermes profile create work-agent\n如果要基于现在的配置克隆的话就加--clone参数，这样不用重新配一遍基础内容：\nhermes profile create work-agent --clone-from default\n默认的Profile名字是default对吧？\n\n第二步：给新Profile配置专属参数\n切换到新的Profile：\nhermes profile use work-agent\n然后就可以像配置主Agent一样给这个单独的Profile配置参数了：\n- 配置专属模型/API密钥：hermes model 交互式选择，或者直接改配置文件\n- 启用专属工具集：hermes tools enable xxx 给这个Profile单独开工具\n- 安装专属技能：hermes skills install xxx 只有这个Profile能看到这些技能\n- 配置其他自定义参数：比如内存开关、TTS/STT配置、安全规则这些，都和主Agent配置方法一样，不会影响其他Profile\n\n然后第三步：使用独立Profile\n两种用法：\n1. 临时启动用这个Profile：hermes --profile work-agent\n2. 设为默认每次启动自动用：hermes profile use work-agent 之后直接输入hermes就用这个Profile\n\n然后📌 **每个Profile完全独立隔离的内容**：\n要列清楚，让用户知道隔离的是什么：\n✅ 独立的config.yaml配置（模型、API密钥、工具开关、自定义规则全分开）\n✅ 独立的技能库（~/.hermes/profiles/xxx/skills/，安装的技能不会互相影响）\n✅ 独立的内存记录（用户偏好、环境记忆完全分开，工作和个人的记忆不互通）\n✅ 独立的会话历史（不同Profile的聊天记录完全隔离）\n✅ 独立的cron定时任务、webhook配置、授权凭证\n✅ 独立的日志和缓存目录\n\n然后🎯 **常见多Profile使用场景示例**：\n可以给几个例子，用户可以直接套用：\n1. 「work-agent」工作专属Profile：\n - 配置公司内网权限、企业工具集、工作相关技能（比如公司内部文档解析、汇报PPT生成、项目管理工具对接）\n - 用企业专属模型/API密钥，工作记忆和个人完全分开\n2. 「dev-agent」开发专属Profile：\n - 启用全部开发工具集、安装代码相关技能、配置开发环境的终端权限\n - 用高性能编码模型，会话记录全是开发相关内容\n3. 「personal-agent」个人使用Profile：\n - 配置生活相关技能、智能家居控制、个人日程管理、内容生成工具\n - 独立的个人记忆，和工作内容完全隔离\n4. 「test-agent」测试专用Profile：\n - 测试新技能、新工具、新模型的时候用，搞坏了直接删掉重建就行，不会影响主力Agent的配置\n\n然后🔧 **常用Profile管理命令**：\n把常用的命令列出来方便用户查：\n`bash\n# 查看所有已创建的Profile，带*的是当前默认\nhermes profile list\n\n# 切换默认Profile\nhermes profile use <profile名称>\n\n# 查看指定Profile的详细配置\nhermes profile show <profile名称>\n\n# 重命名Profile\nhermes profile rename <旧名称> <新名称>\n\n# 导出Profile做备份（会打包成tar.gz）\nhermes profile export <profile名称> -o ./xxx_profile_backup.tar.gz\n\n# 导入备份的Profile\nhermes profile`

`import ./xxx_profile_backup.tar.gz\n\n# 删除不需要的Profile\nhermes profile delete <profile名称>\n` \n\n然后💡 **注意事项**：\n1. 切换Profile后，需要重启当前会话（输入/new或者退出重进hermes）才会生效\n2. 每个Profile的配置文件都保存在 `~/.hermes/profiles/<名称>/` 目录下，可以手动编辑config.yaml自定义高级配置\n3. 如果需要给不同Profile配置不同的终端运行权限/工作目录，可以在每个Profile的config.yaml的terminal部分单独设置cwd、backend等参数\n\n最后可以问用户需不需要帮他现在就创建对应的Profile，或者有没有具体的配置需求对吧？"

/home/z/.hermes/sessions/session_20260414_205002_6cbc9a.json- },

/home/z/.hermes/sessions/session_20260414_205002_6cbc9a.json- "reasoning": "\n用户现在让克隆三个agent配置已经成功了对吧？首先先告诉用户创建成功了，然后列一下三个agent分别是什么，然后告诉用户怎么使用，还有后续的配置方式。\n首先，三个Agent已经创建完成，继承了默认default的所有配置（包括当前在用的模型、已安装的张雪峰/孔子/PPT这些技能、基础配置全部同步完成，还有创建了快捷启动别名，直接输别名就能用，不用每次加--profile参数。\n然后要告诉用户使用方式：\n1. 直接用快捷别名启动，比--profile更方便：\n- 启动工作Agent：直接输 `work-agent` 直接进入会话\n- 启动开发Agent：直接输 `dev-agent`\n- 启动个人Agent：直接输 `personal-agent`\n2. 如果需要单独给某个Agent改配置，比如改模型、装专属技能、开专属工具，就用对应的别名加命令就行：\n比如给dev-agent装开发专属技能：`dev-agent skills install xxx`\n给work-agent配置企业API：`work-agent setup`\n3. 如果要给某个Agent单独启动网关对接平台（比如单独给personal-agent对接个人微信，work-agent对接企业微信），就用对应的别名加gateway命令：\n `work-agent gateway start`\n4. 还可以自定义每个Agent的人设/回答风格，编辑对应目录下的SOUL.md文件就行，比如改work-agent的风格更严谨商务，dev-agent更专业技术向。\n然后问用户有没有需要现在帮配置的地方？比如给某个Agent单独调整配置、开特定工具、修改

人设之类的？\n对，还要说明现在三个Agent都是完全隔离的，互相不会影响，会话、记忆、技能、配置都是独立的。\n"

--

/home/z/.hermes/sessions/session_20260414_205002_6cbc9a.json: "reasoning": "\n用户现在让我回顾上面的对话，看要不要保存或者更新skill对吧？首先先理清楚上面完成的核心任务：是创建了三个独立的健康领域Agent（医生/健康管理师/营养师），配置了专属人设、专属Skill绑定、调度规则，这个是完整的多Agent垂直领域部署方案，属于可复用的非 trivial流程对吧？\n\n首先，这个方案是通用的，用户以后如果要做其他垂直领域的多Agent部署（比如法律、教育、金融类的）都可以复用这套流程，所以值得做成一个新的Skill，叫「垂直领域多Agent部署方案」对吧？\n\n那现在需要按照Skill的规范来创建，对吧？首先写清楚Skill的名称、描述、适用场景、详细的部署步骤，还有刚才用到的配置命令、调度规则这些，都是可以复用的。\n\n等等，刚才的流程里包含了：1. 基于default克隆多个独立Profile 2. 给每个Profile自定义专属人设（SOUL.md配置）3. 给每个Profile绑定专属预加载Skill、禁用无关Skill 4. 配置触发调度规则 这几个步骤，都是通用可复制的。\n\n那现在应该创建这个新的Skill对吧？不对，等下，按照要求，如果是可复用的就创建新Skill，对吧？那现在把这个Skill的内容整理好，然后用write_file存到技能目录里？或者先输出内容？不对，按照工具调用的要求，应该用skill_manage create吗？不对，刚才的技能目录是~/.hermes/skills/对吧？\n\n哦对，先确认：这个任务是完成了一套「垂直领域多Agent集群快速部署」的可复用流程，包含克隆Profile、人设配置、Skill绑定、调度配置全流程，没有现成的Skill，所以需要创建新的Skill。\n\n那现在先写这个Skill的内容，然后用skill_manage create？不对，看之前的skill_manage的参数，create需要name、content，还有可选的category对吧？\n\n对，Skill的名称就叫「vertical-multiagent-deployment」，中文叫「垂直领域多Agent集群快速部署」，属于devops类别对吧？\n\n然后内容包含：适用场景、前置条件、详细步骤（克隆Profile、人设配置、Skill绑定、调度配置）、常用命令、配置示例，还有刚才的健康领域的示例，这样用户下次要做其他领域的多Agent部署直接用这个Skill就行。\n\n等等，或者按照之前的Skill的格式，用YAML frontmatter加markdown内容对吧？\n\n对，那现在先整理Skill的内容：\n\n首先frontmatter：\n---\nname: vertical-multiagent-deployment\ndescription: 快速部署垂直领域多Agent集群，支持多独立Profile克隆、专属人设配置、专属Skill绑定、调度规则配置全流程，适用于医疗/法律/教育/金融等多角色专业场景的Agent部署。\ncategory: devops\ntags: [\"multi-agent\", \"profile\", \"skill-binding\", \"vertical-domain\"]\n---\n\n然后正文部分：\n# 垂直领域多Agent集群快速部署Skill\n## 适用场景\n需要部署多个独立的垂直领域专业Agent的场景，比如：\n- 健康领域：医生/健康管理师/营养师多角色Agent\n- 法律领域：律师/法务/合规多角色Agent\n- 教育领域：讲师/助教/学习规划师多角色Agent\n- 企业场景：行政/HR/IT支持多角色Agent\n\n## 前置条件\n1. Hermes Agent已经正常安装配置，默认default Profile已经配置好基础模型和API密钥\n2. 已经准备好各角色的人设说明、专属Skill列表\n\n## 部署步骤\n### 1. 批量克隆独立Profile\n基于默认配置批量克隆多个独立Agent，完全隔离配置、记忆、技能：\n`bash\n# 克隆多个Profile，自动继承默认配置的模型、密钥、已有技能\nhermes profile create [角色1名称] --clone-from default\nhermes profile create [角色2名称] --clone-from default\nhermes profile create [角色3名称] --clone-from default\n\n# 查看所有已创建的Profile\nhermes profile list\n`\n克隆完成后会自动生成全局快捷启动别名，直接输入角色名称即可启动对应

Agent。\n\n### 2. 配置各Agent专属人设\n给每个Agent编写SOUL.md人设文件，定义角色、性格、规则、回答风格：\n`yaml\n---\nname: [角色名称]\npersonality: [性格描述，比如专业严谨、耐心细致]\nrole: [角色身份说明，比如10年经验三甲全科医生]\nrules:\n  1. [规则1，比如所有医疗建议仅供参考，开头必须带合规提醒]\n  2. [规则2，比如不给出具体处方药剂量建议]\nlanguage_style: [回答风格，比如亲切专业、通俗易懂]\n---\n`\n写入对应Agent的配置目录：\n`bash\necho \"[SOUL.md内容]\" > ~/.hermes/profiles/[角色名称]/SOUL.md\n`\n\n### 3. 配置专属Skill绑定与禁用\n给每个Agent配置自动预加载的专属专业Skill，同时禁用无关Skill防止输出跑偏：\n`bash\n# 配置预加载专属Skill\n[角色别名] config set agent.preload_skills '[\"skill1\", \"skill2\", \"skill3\"]'\n# 配置禁用无关Skill\n[角色别名] config set agent.disabled_skills '[\"skill4\", \"skill5\", \"skill6\"]'\n`\n\n### 4. 配置调度规则\n在主Agent中配置触发规则，用户提问时自动路由到对应Agent：\n| 触发方式 | 示例 |\n|----------|------|\n| 关键词触发 | 开头带「医生+问题」自动路由到医生Agent |\n| 场景触发 | 提问涉及体检报告解读自动路由到健康管理师Agent |\n| 多Agent协同 | 复杂问题自动触发多Agent并行处理，整合结果返回 |\n\n## 健康领域部署示例（本次任务使用的方案）\n`bash\n# 1. 克隆三个健康类Agent\nhermes profile create work-agent --clone-from default # 医生\nhermes profile create dev-agent --clone-from default # 健康管理师\nhermes profile create personal-agent --clone-from default # 营养师\n\n# 2. 写入各角色SOUL.md人设（内容参考本次任务的配置）\n# 3. 配置专属Skill绑定\nwork-agent config set agent.preload_skills '[\"clinical-guidelines\", \"rational-medication\", \"medical-science-popularization\", \"consultation-standard\"]'\ndev-agent config set agent.preload_skills '[\"physical-report-interpretation\", \"health-management-plan\", \"chronic-disease-management\"]'\npersonal-agent config set agent.preload_skills '[\"chinese-dietary-guidelines\", \"nutrition-calculation\", \"recipe-generation\", \"food-safety\"]'\n# 4. 统一禁用无关Skill\nwork-agent config set agent.disabled_skills '[\"zhangxuefeng-skill\", \"kongfuzi-skill\", \"powerpoint\", \"claude-code\"]'\ndev-agent config set agent.disabled_skills '[\"zhangxuefeng-skill\", \"kongfuzi-skill\", \"powerpoint\", \"claude-code\"]'\npersonal-agent config set agent.disabled_skills '[\"zhangxuefeng-skill\", \"kongfuzi-skill\", \"powerpoint\", \"claude-code\"]'\n`\n\n## 注意事项\n1. 每个Agent完全独立，配置、记忆、技能、会话100%隔离，符合隐私保护要求\n2. 可给每个Agent单独启动独立网关，对接不同的聊天平台对外提供服务\n3. 可随时调整各Agent的预加载Skill、禁用列表、人设配置，无需重启主Agent\n\n然后现在用skill_manage create来创建这个新的Skill对吧？\n\n不对，等下，用户现在的要求是如果值得保存就创建或者更新Skill，那这个是新的可复用的流程，所以需要创建这个新的Skill。\n\n所以现在调用skill_manage create，参数name是vertical-multiagent-deployment，content是上面的内容，category是devops。\n\n对，那现在按照工具调用的格式来写。",

/home/z/.hermes/sessions/session_20260415_091111_cbc08e.json: "content": "[SYSTEM: The user has invoked the \"hermes-agent\" skill, indicating they want you to follow its instructions. The full skill content is loaded below.]\n\n---\nname: hermes-agent\ndescription: Complete guide to using and extending Hermes Agent — CLI usage, setup, configuration, spawning additional agents, gateway platforms, skills, voice, tools, profiles, and a concise contributor reference. Load this skill when helping users configure Hermes, troubleshoot issues, spawn agent instances, or make code contributions.\nversion: 2.0.0\nauthor: Hermes Agent + Teknium\nlicense: MIT\nmetadata:\n hermes:\n   tags: [hermes, setup, configuration, multi-agent, spawning, cli, gateway, development]\n   homepage: https://github.com/NousResearch/hermes-agent\n   related_skills: [claude-code, codex, opencode]\n---\n\n# Hermes Agent\n\nHermes Agent is an open-source AI agent framework by Nous Research that runs in your terminal, messaging platforms, and IDEs. It belongs to the same category as Claude Code (Anthropic), Codex (OpenAI), and OpenClaw — autonomous coding and task-execution agents that use tool calling to interact with your system. Hermes works with any LLM provider (OpenRouter, Anthropic, OpenAI, DeepSeek, local models, and 15+ others) and runs on Linux, macOS, and WSL.\n\nWhat makes Hermes different:\n\n- **Self-improving through skills** — Hermes learns from experience by saving reusable procedures as skills. When it solves a complex problem, discovers a workflow, or gets corrected, it can persist that knowledge as a skill document that loads into future sessions. Skills accumulate over time, making the agent better at your specific tasks and environment.\n- **Persistent memory across sessions** — remembers who you are, your preferences, environment details, and lessons learned. Pluggable memory backends (built-in, Honcho, Mem0, and more) let you choose how memory works.\n- **Multi-platform gateway** — the same agent runs on Telegram, Discord, Slack, WhatsApp, Signal, Matrix, Email, and 10+ other platforms with full tool access, not just chat.\n- **Provider-agnostic** — swap models and providers mid-workflow without changing anything else. Credential pools rotate across multiple API keys automatically.\n- **Profiles** — run multiple independent Hermes instances with isolated configs, sessions, skills, and memory.\n- **Extensible**

— plugins, MCP servers, custom tools, webhook triggers, cron scheduling, and the full Python ecosystem.\n\nPeople use Hermes for software development, research, system administration, data analysis, content creation, home automation, and anything else that benefits from an AI agent with persistent context and full system access.\n\n**This skill helps you work with Hermes Agent effectively** — setting it up, configuring features, spawning additional agent instances, troubleshooting issues, finding the right commands and settings, and understanding how the system works when you need to extend or contribute to it.\n\n**Docs:** https://hermes-agent.nousresearch.com/docs/\n\n## Quick Start\n\n`bash\n# Install\ncurl -fsSL https://raw.githubusercontent.com/NousResearch/hermes-agent/main/scripts/install.sh | bash\n\n# Interactive chat (default)\nhermes\n\n# Single query\nhermes chat -q \"What is the capital of France?\"\n\n# Setup wizard\nhermes setup\n\n# Change model/provider\nhermes model\n\n# Check health\nhermes doctor\n`\n\n---\n\n## CLI Reference\n\n### Global Flags\n\n`\nhermes [flags] [command]\n\n --version, -V   Show version\n --resume, -r SESSION   Resume session by ID or title\n --continue, -c [NAME]   Resume by name, or most recent session\n --worktree, -w   Isolated git worktree mode (parallel agents)\n --skills, -s SKILL   Preload skills (comma-separate or repeat)\n --profile, -p NAME   Use a named profile\n --yolo   Skip dangerous command approval\n --pass-session-id   Include session ID in system prompt\n`\n\nNo subcommand defaults to `chat`.\n\n### Chat\n\n`\nhermes chat [flags]\n -q, --query TEXT   Single query, non-interactive\n -m, --model MODEL   Model (e.g. anthropic/claude-sonnet-4)\n -t, --toolsets LIST   Comma-separated toolsets\n --provider PROVIDER   Force provider (openrouter, anthropic, nous, etc.)\n -v, --verbose   Verbose output\n -Q, --quiet   Suppress banner, spinner, tool previews\n --checkpoints   Enable filesystem checkpoints (/rollback)\n --source TAG   Session source tag (default: cli)\n`\n\n### Configuration\n\n`\nhermes setup [section]   Interactive wizard (model|terminal|gateway|tools|agent)\nhermes model   Interactive model/provider picker\nhermes config   View current config\nhermes config edit   Open config.yaml in $EDITOR\nhermes config set KEY VAL   Set a config value\nhermes config path   Print config.yaml path\nhermes config env-path   Print .env path\nhermes config check   Check for missing/outdated config\nhermes config migrate   Update config with new options\nhermes login [--provider P] OAuth login (nous, openai-codex)\nhermes logout   Clear stored auth\nhermes

Set via `hermes model` or `hermes setup`.\n\n| Provider | Auth | Key env var |\n|---------|------|---------|\n| OpenRouter | API key | `OPENROUTER_API_KEY` |\n| Anthropic | API key | `ANTHROPIC_API_KEY` |\n| Nous Portal | OAuth | `hermes login --provider nous` |\n| OpenAI Codex | OAuth | `hermes login --provider openai-codex` |\n| GitHub Copilot | Token | `COPILOT_GITHUB_TOKEN` |\n| Google Gemini | API key | `GOOGLE_API_KEY` or `GEMINI_API_KEY` |\n| DeepSeek | API key | `DEEPSEEK_API_KEY` |\n| xAI / Grok | API key | `XAI_API_KEY` |\n| Hugging Face | Token | `HF_TOKEN` |\n| Z.AI / GLM | API key | `GLM_API_KEY` |\n| MiniMax | API key | `MINIMAX_API_KEY` |\n| MiniMax CN | API key | `MINIMAX_CN_API_KEY` |\n| Kimi / Moonshot | API key | `KIMI_API_KEY` |\n| Alibaba / DashScope | API key | `DASHSCOPE_API_KEY` |\n| Xiaomi MiMo | API key | `XIAOMI_API_KEY` |\n| Kilo Code | API key | `KILOCODE_API_KEY` |\n| AI Gateway (Vercel) | API key | `AI_GATEWAY_API_KEY` |\n| OpenCode Zen | API key | `OPENCODE_ZEN_API_KEY` |\n| OpenCode Go | API key | `OPENCODE_GO_API_KEY` |\n| Qwen OAuth | OAuth | `hermes login --provider qwen-oauth` |\n| Custom endpoint | Config | `model.base_url` + `model.api_key` in config.yaml |\n| GitHub Copilot ACP | External | `COPILOT_CLI_PATH` or Copilot CLI |\n\nFull provider docs: https://hermes-agent.nousresearch.com/docs/integrations/providers\n\n### Toolsets\n\nEnable/disable via `hermes tools` (interactive) or `hermes tools enable/disable NAME`.\n\n| Toolset | What it provides |\n|---------|---------|\n| `web` | Web search and content extraction |\n| `browser` | Browser automation (Browserbase, Camofox, or local Chromium) |\n| `terminal` | Shell commands and process management |\n| `file` | File read/write/search/patch |\n| `code_execution` | Sandboxed Python execution |\n| `vision` | Image analysis |\n| `image_gen` | AI image generation |\n| `tts` | Text-to-speech |\n| `skills` | Skill browsing and management |\n| `memory` | Persistent cross-session memory |\n| `session_search` | Search past conversations |\n| `delegation` | Subagent task delegation |\n| `cronjob` | Scheduled task management |\n| `clarify` | Ask user clarifying questions |\n| `messaging` | Cross-platform message sending |\n| `search` | Web search only (subset of `web`) |\n| `todo` | In-session task planning and tracking |\n| `rl` | Reinforcement learning tools (off by default) |\n| `moa` | Mixture of Agents (off by default) |\n| `homeassistant` | Smart home control (off by default) |\n\nTool changes take effect on `/reset` (new session). They do NOT apply mid-conversation to preserve prompt caching.\n\n---\n\n## Voice & Transcription\n\n### STT (Voice → Text)\n\nVoice messages from messaging platforms are auto-transcribed.\n\nProvider priority (auto-detected):\n1. **Local faster-whisper** — free, no API key: `pip install faster-whisper`\n2. **Groq Whisper** — free tier: set `GROQ_API_KEY`\n3. **OpenAI Whisper** — paid: set `VOICE_TOOLS_OPENAI_KEY`\n4. **Mistral Voxtral** — set `MISTRAL_API_KEY`\n\nConfig:\n`yaml\nstt:\n  enabled: true\n  provider: local        # local, groq, openai, mistral\n  local:\n    model: base         # tiny, base, small, medium, large-v3\n`\n\n### TTS (Text → Voice)\n\n| Provider | Env var | Free? |\n|---------|---------|---|\n| Edge TTS | None | Yes (default) |\n| ElevenLabs | `ELEVENLABS_API_KEY` | Free tier |\n| OpenAI |

`VOICE_TOOLS_OPENAI_KEY` | Paid |\n| MiniMax | `MINIMAX_API_KEY` | Paid |\n| Mistral (Voxtral) | `MISTRAL_API_KEY` | Paid |\n| NeuTTS (local) | None (`pip install neutts[all]` + `espeak-ng`) | Free |\n\nVoice commands: `/voice on` (voice-to-voice), `/voice tts` (always voice), `/voice off` .\n\n---\n\n## Spawning Additional Hermes Instances\n\nRun additional Hermes processes as fully independent subprocesses — separate sessions, tools, and environments.\n\n### When to Use This vs delegate_task\n\n| | `delegate_task` | Spawning `hermes` process |\n|-|----------------|-------------------------|\n| Isolation | Separate conversation, shared process | Fully independent process |\n| Duration | Minutes (bounded by parent loop) | Hours/days |\n| Tool access | Subset of parent's tools | Full tool access |\n| Interactive | No | Yes (PTY mode) |\n| Use case | Quick parallel subtasks | Long autonomous missions |\n\n### One-Shot Mode\n\n `\nterminal(command=\"hermes chat -q 'Research GRPO papers and write summary to ~/research/grpo.md'\", timeout=300)\n\n# Background for long tasks:\nterminal(command=\"hermes chat -q 'Set up CI/CD for ~/myapp'\", background=true)\n` \n\n### Interactive PTY Mode (via tmux)\n\nHermes uses prompt_toolkit, which requires a real terminal. Use tmux for interactive spawning:\n\n `\n# Start\nterminal(command=\"tmux new-session -d -s agent1 -x 120 -y 40 'hermes'\", timeout=10)\n\n# Wait for startup, then send a message\nterminal(command=\"sleep 8 && tmux send-keys -t agent1 'Build a FastAPI auth service' Enter\", timeout=15)\n\n# Read output\nterminal(command=\"sleep 20 && tmux capture-pane -t agent1 -p\", timeout=5)\n\n# Send follow-up\nterminal(command=\"tmux send-keys -t agent1 'Add rate limiting middleware' Enter\", timeout=5)\n\n# Exit\nterminal(command=\"tmux send-keys -t agent1 '/exit' Enter && sleep 2 && tmux kill-session -t agent1\", timeout=10)\n` \n\n### Multi-Agent Coordination\n\n `\n# Agent A: backend\nterminal(command=\"tmux new-session -d -s backend -x 120 -y 40 'hermes -w'\", timeout=10)\nterminal(command=\"sleep 8 && tmux send-keys -t backend 'Build REST API for user management' Enter\", timeout=15)\n\n# Agent B: frontend\nterminal(command=\"tmux new-session -d -s frontend -x 120 -y 40 'hermes -w'\", timeout=10)\nterminal(command=\"sleep 8 && tmux send-keys -t frontend 'Build React dashboard for user management' Enter\", timeout=15)\n\n# Check progress, relay context between them\nterminal(command=\"tmux capture-pane -t backend -p | tail -30\", timeout=5)\nterminal(command=\"tmux send-keys -t frontend 'Here is the API schema from the backend agent: ...' Enter\", timeout=5)\n` \n\n### Session Resume\n\n `\n# Resume most recent session\nterminal(command=\"tmux new-session -d -s resumed 'hermes --continue'\", timeout=10)\n\n# Resume specific session\nterminal(command=\"tmux new-session -d -s resumed 'hermes --

`resume 20260225_143052_a1b2c3'\", timeout=10)\n` \n\n### Tips\n\n- **Prefer `delegate_task` for quick subtasks** — less overhead than spawning a full process\n- **Use `-w` (worktree mode)** when spawning agents that edit code — prevents git conflicts\n- **Set timeouts** for one-shot mode — complex tasks can take 5-10 minutes\n- **Use `hermes chat -q` for fire-and-forget** — no PTY needed\n- **Use tmux for interactive sessions** — raw PTY mode has `\\r` vs `\\n` issues with prompt_toolkit\n- **For scheduled tasks**, use the `cronjob` tool instead of spawning — handles delivery and retry\n\n---\n\n## Troubleshooting\n\n### Voice not working\n1. Check `stt.enabled: true` in config.yaml\n2. Verify provider: `pip install faster-whisper` or set API key\n3. In gateway: `/restart`. In CLI: exit and relaunch.\n\n### Tool not available\n1. `hermes tools` — check if toolset is enabled for your platform\n2. Some tools need env vars (check `.env`)\n3. `/reset` after enabling tools\n\n### Model/provider issues\n1. `hermes doctor` — check config and dependencies\n2. `hermes login` — re-authenticate OAuth providers\n3. Check `.env` has the right API key\n4. **Copilot 403**: `gh auth login` tokens do NOT work for Copilot API. You must use the Copilot-specific OAuth device code flow via `hermes model` → GitHub Copilot.\n\n### Changes not taking effect\n- **Tools/skills:** `/reset` starts a new session with updated toolset\n- **Config changes:** In gateway: `/restart`. In CLI: exit and relaunch.\n- **Code changes:** Restart the CLI or gateway process\n\n### Skills not showing\n1. `hermes skills list` — verify installed\n2. `hermes skills config` — check platform enablement\n3. Load explicitly: `/skill name` or `hermes -s name` \n\n### Gateway issues\nCheck logs first:\n `bash\ngrep -i \"failed to send\\|error\" ~/.hermes/logs/gateway.log | tail -20\n` \n\nCommon gateway problems:\n- **Gateway dies on SSH logout**: Enable linger: `sudo loginctl enable-linger $USER` \n- **Gateway dies on WSL2 close**: WSL2 requires `systemd=true` in `/etc/wsl.conf` for systemd services to work. Without it, gateway falls back to `nohup` (dies when session closes).\n- **Gateway crash loop**: Reset the failed state: `systemctl --user reset-failed hermes-gateway` \n\n### Platform-specific issues\n- **Discord bot silent**: Must enable **Message Content Intent** in Bot → Privileged Gateway Intents.\n- **Slack bot only works in DMs**: Must subscribe to `message.channels` event. Without it, the bot ignores public channels.\n- **Windows HTTP 400 \"No models provided\"**: Config file encoding issue (BOM). Ensure `config.yaml` is saved as UTF-8 without BOM.\n\n### Auxiliary models not working\nIf `auxiliary` tasks (vision, compression, session_search) fail silently, the `auto` provider can't find a backend. Either set `OPENROUTER_API_KEY` or `GOOGLE_API_KEY`, or explicitly configure each auxiliary task's provider:\n `bash\nhermes config set auxiliary.vision.provider <your_provider>\nhermes config set auxiliary.vision.model <model_name>\n` \n\n---\n\n## Where to Find Things\n\n| Looking for... | Location |\n|----------|----------|\n| Config options | `hermes config edit` or Configuration docs |\n| Available tools | `hermes tools list` or Tools reference |\n| Slash commands | `/help` in session or Slash commands reference |\n| Skills catalog | `hermes skills browse` or Skills catalog |\n| Provider setup | `hermes model` or Providers guide |\n| Platform setup | `hermes gateway`

`setup` or Messaging docs |\n| MCP servers | `hermes mcp list` or MCP guide |\n| Profiles | `hermes profile list` or Profiles docs |\n| Cron jobs | `hermes cron list` or Cron docs |\n| Memory | `hermes memory status` or Memory docs |\n| Env variables | `hermes config env-path` or Env vars reference |\n| CLI commands | `hermes --help` or CLI reference |\n| Gateway logs | `~/.hermes/logs/gateway.log` |\n| Session files | `~/.hermes/sessions/` or `hermes sessions browse` |\n| Source code | `~/.hermes/hermes-agent/` |\n\n---\n\n## Contributor Quick Reference\n\nFor occasional contributors and PR authors. Full developer docs: https://hermes-agent.nousresearch.com/docs/developer-guide/\n\n### Project Layout\n\n `\nhermes-agent/\n├── run_agent.py # AIAgent — core conversation loop\n├── model_tools.py # Tool discovery and dispatch\n├── toolsets.py # Toolset definitions\n├── cli.py # Interactive CLI (HermesCLI)\n├── hermes_state.py # SQLite session store\n├── agent/ # Prompt builder, context compression, memory, model routing, credential pooling, skill dispatch\n├── hermes_cli/ # CLI subcommands, config, setup, commands\n│ ├── commands.py # Slash command registry (CommandDef)\n│ ├── config.py # DEFAULT_CONFIG, env var definitions\n│ └── main.py # CLI entry point and argparse\n├── tools/ # One file per tool\n│ └── registry.py # Central tool registry\n├── gateway/ # Messaging gateway\n│ └── platforms/ # Platform adapters (telegram, discord, etc.)\n├── cron/ # Job scheduler\n├── tests/ # ~3000 pytest tests\n└── website/ # Docusaurus docs site\n` \n\nConfig: `~/.hermes/config.yaml` (settings), `~/.hermes/.env` (API keys).\n\n### Adding a Tool (3 files)\n\n**1. Create `tools/your_tool.py`**:\n `python\nimport json, os\nfrom tools.registry import registry\n\ndef check_requirements() -> bool:\n return bool(os.getenv(\"EXAMPLE_API_KEY\"))\n\ndef example_tool(param: str, task_id: str = None) -> str:\n return json.dumps({\"success\": True, \"data\": \"...\"})\n\nregistry.register(\n name=\"example_tool\",\n toolset=\"example\",\n schema={\"name\": \"example_tool\", \"description\": \"...\", \"parameters\": {...}},\n handler=lambda args, **kw: example_tool(\n   param=args.get(\"param\", \"\"), task_id=kw.get(\"task_id\")),\n check_fn=check_requirements,\n requires_env=[\"EXAMPLE_API_KEY\"],\n)\n` \n\n**2. Add import** in `model_tools.py` → `_discover_tools()` list.\n\n**3. Add to `toolsets.py`** → `_HERMES_CORE_TOOLS` list.\n\nAll handlers must return JSON strings. Use `get_hermes_home()` for paths, never hardcode `~/.hermes`.\n\n### Adding a Slash

Command\n\n1. Add `CommandDef` to `COMMAND_REGISTRY` in `hermes_cli/commands.py` \n2. Add handler in `cli.py` → `process_command()` \n3. (Optional) Add gateway handler in `gateway/run.py` \n\nAll consumers (help text, autocomplete, Telegram menu, Slack mapping) derive from the central registry automatically.\n\n### Agent Loop (High Level)\n\n `\nrun_conversation():\n 1. Build system prompt\n 2. Loop while iterations < max:\n   a. Call LLM (OpenAI-format messages + tool schemas)\n   b. If tool_calls → dispatch each via handle_function_call() → append results → continue\n   c. If text response → return\n 3. Context compression triggers automatically near token limit\n` \n\n### Testing\n\n `bash\npython -m pytest tests/ -o 'addopts=' -q   # Full suite\npython -m pytest tests/tools/ -q   # Specific area\n` \n\n- Tests auto-redirect `HERMES_HOME` to temp dirs — never touch real `~/.hermes/` \n- Run full suite before pushing any change\n- Use `-o 'addopts='` to clear any baked-in pytest flags\n\n### Commit Conventions\n\n `\ntype: concise subject line\n\nOptional body.\n` \n\nTypes: `fix:` , `feat:` , `refactor:` , `docs:` , `chore:` \n\n### Key Rules\n\n- **Never break prompt caching** — don't change context, tools, or system prompt mid-conversation\n- **Message role alternation** — never two assistant or two user messages in a row\n- Use `get_hermes_home()` from `hermes_constants` for all paths (profile-safe)\n- Config values go in `config.yaml` , secrets go in `.env` \n- New tools need a `check_fn` so they only appear when requirements are met"

/home/z/.hermes/sessions/session_20260415_091111_cbc08e.json- },

/home/z/.hermes/sessions/session_20260415_091111_cbc08e.json- {

/home/z/.hermes/sessions/session_20260415_092905_88d4a2.json: "content": "{\"success\": true, \"name\": \"vertical-multiagent-deployment\", \"description\": \"快速部署垂直领域多Agent集群，支持多独立Profile克隆、专属人设配置、专属Skill绑定、调度规则配置全流程，适用于医疗/法律/教育/金融等多角色专业场景的Agent部署。\", \"tags\": [\"multi-agent\", \"profile\", \"skill-binding\", \"vertical-domain\"], \"related_skills\": [], \"content\": \"---\\nname: vertical-multiagent-deployment\\ndescription: 快速部署垂直领域多Agent集群，支持多独立Profile克隆、专属人设配置、专属Skill绑定、调度规则配置全流程，适用于医疗/法律/教育/金融等多角色专业场景的Agent部署。\\ncategory: devops\\ntags: [\\\"multi-agent\\\", \\\"profile\\\", \\\"skill-binding\\\", \\\"vertical-domain\\\"]\\n---\\n\\n# 垂直领域多Agent集群快速部署Skill\\n## 适用场景\\n需要部署多个独立的垂直领域专业Agent的场景，比如：\\n- 健康领域：医生/健康管理师/营养师多角色Agent\\n- 法律领域：律师/法务/合规多角色Agent\\n- 教育领域：讲师/助教/学习规划师多角色Agent\\n- 企业场景：行政/HR/IT支持多角色Agent\\n\\n## 前置条件\\n1. Hermes Agent已经正常安装配置，默认default Profile已经配置好基础模型和API密钥\\n2. 已经准备好各角色的人设说明、专属Skill列表\\n\\n## 部署步骤\\n### 1. 批量克隆独立Profile\\n基于默认配置批量克隆多个独立Agent，完全隔离配置、记忆、技能：\\n`bash\\n# 克隆多个Profile，自动继承默认配置的模型、密钥、已有技能\\nhermes profile create [角色1名称] --clone-from default\\nhermes profile create [角色2名称] --clone-from default\\nhermes profile create [角色3名称] --clone-from default\\n\\n# 查看所有已创建的Profile\\nhermes profile list\\n`\\n克隆完成后会自动生成全局快捷启动别名，直接输入角色名称即可启动对应Agent。\\n\\n### 2. 配置各Agent专属人设\\n给每个Agent编写SOUL.md人设文件，定义角色、性格、规则、回答风格：\\n`yaml\\n---\\nname: [角色名称]\\npersonality: [性格描述，比如专业严谨、耐心细致]\\nrole: [角色身份说明，比如10年经验三甲全科医生]\\nrules:\\n  1. [规则1，比如所有医疗建议仅供参考，开头必须带合规提醒]\\n  2. [规则2，比如不给出具体处方药剂量建议]\\nlanguage_style: [回答风格，比如亲切专业、通俗易懂]\\n---\\n`\\n写入对应Agent的配置目录：\\n`bash\\necho \\\"[SOUL.md内容]\\\" > ~/.hermes/profiles/[角色名称]/SOUL.md\\n`\\n\\n### 3. 配置专属Skill绑定与禁用\\n给每个Agent配置自动预加载的专属专业Skill，同时禁用无关Skill防止输出跑偏：\\n`bash\\n# 配置预加载专属Skill\\n[角色别名] config set agent.preload_skills '[\\\"skill1\\\", \\\"skill2\\\", \\\"skill3\\\"]'\\n# 配置禁用无关Skill\\n[角色别名] config set

agent.disabled_skills '[\\\"skill4\\\", \\\"skill5\\\", \\\"skill6\\\"]'\\n\\n\\n### 4. 配置调度规则\\n在主Agent中配置触发规则，用户提问时自动路由到对应Agent：\\n| 触发方式 | 示例 |\\n|----------|------|\\n| 关键词触发 | 开头带「医生+问题」自动路由到医生Agent |\\n| 场景触发 | 提问涉及体检报告解读自动路由到健康管理师Agent |\\n| 多Agent协同 | 复杂问题自动触发多Agent并行处理，整合结果返回 |\\n\\n## 健康领域部署示例（本次任务使用的方案）\\n bash\\n# 1. 克隆三个健康类Agent\\nhermes profile create work-agent --clone-from default # 医生\\nhermes profile create dev-agent --clone-from default # 健康管理师\\nhermes profile create personal-agent --clone-from default # 营养师\\n\\n# 2. 写入各角色SOUL.md人设（内容参考本次任务的配置）\\n# 3. 配置专属Skill绑定\\nwork-agent config set agent.preload_skills '[\\\"clinical-guidelines\\\", \\\"rational-medication\\\", \\\"medical-science-popularization\\\", \\\"consultation-standard\\\"]'\\ndev-agent config set agent.preload_skills '[\\\"physical-report-interpretation\\\", \\\"health-management-plan\\\", \\\"chronic-disease-management\\\"]'\\npersonal-agent config set agent.preload_skills '[\\\"chinese-dietary-guidelines\\\", \\\"nutrition-calculation\\\", \\\"recipe-generation\\\", \\\"food-safety\\\"]'\\n# 4. 统一禁用无关Skill\\nwork-agent config set agent.disabled_skills '[\\\"zhangxuefeng-skill\\\", \\\"kongfuzi-skill\\\", \\\"powerpoint\\\", \\\"claude-code\\\"]'\\ndev-agent config set agent.disabled_skills '[\\\"zhangxuefeng-skill\\\", \\\"kongfuzi-skill\\\", \\\"powerpoint\\\", \\\"claude-code\\\"]'\\npersonal-agent config set agent.disabled_skills '[\\\"zhangxuefeng-skill\\\", \\\"kongfuzi-skill\\\", \\\"powerpoint\\\", \\\"claude-code\\\"]'\\n \\n\\n## 注意事项\\n1. 每个Agent完全独立，配置、记忆、技能、会话100%隔离，符合隐私保护要求\\n2. 可给每个Agent单独启动独立网关，对接不同的聊天平台对外提供服务\\n3. 可随时调整各Agent的预加载Skill、禁用列表、人设配置，无需重启主Agent\\n\", \"path\": \"devops/vertical-multiagent-deployment/SKILL.md\", \"linked_files\": null, \"usage_hint\": null, \"required_environment_variables\": [], \"required_commands\": [], \"missing_required_environment_variables\": [], \"missing_credential_files\": [], \"missing_required_commands\": [], \"setup_needed\": false, \"setup_skipped\": false, \"readiness_status\": \"available\"}",

/home/z/.hermes/sessions/session_20260415_092905_88d4a2.json- "tool_call_id": "call_ibf38kg8tyny7whncf6j8g4n"

/home/z/.hermes/sessions/session_20260415_092905_88d4a2.json- },

/home/z/.hermes/sessions/session_20260415_092905_88d4a2.json- {

/home/z/.hermes/sessions/session_20260415_092905_88d4a2.json- "role": "assistant",

/home/z/.hermes/sessions/session_20260415_092905_88d4a2.json- "content": "",

/home/z/.hermes/sessions/session_20260415_092905_88d4a2.json- "reasoning": "\n现在我已经拿到了vertical-multiagent-deployment技能的现有内容，看到它目前只有部署相关的步骤，缺少部署后的日常使用操作流程，而这次对话里用到的多profile切换、定时任务绑定、专属数据存储都是非常实用的可复用操作，应该补充到这个技能的内容里作为「日常运维&使用指南」章节。\n\n首先我需要找到合适的patch位置，现有内容最后是「注意事项」，我可以在注意事项之前加一个新的章节，旧字符串就是现有内容最后那个注意事项之前的内容：也就是`bash\n# 4. 统一禁用无关Skill\nwork-agent config set agent.disabled_skills '[\"zhangxuefeng-skill\", \"kongfuzi-skill\", \"powerpoint\", \"claude-code\"]'\ndev-agent config set agent.disabled_skills '[\"zhangxuefeng-skill\", \"kongfuzi-skill\", \"powerpoint\", \"claude-code\"]'\npersonal-agent config set agent.disabled_skills '[\"zhangxuefeng-skill\", \"kongfuzi-skill\", \"powerpoint\", \"claude-code\"]'\n`\n\n## 注意事项\n\n然后我要在这中间插入新的「日常运维&使用指南」章节，把这次用到的三个核心操作加进去：1. 关键词触发切换Profile；2. 定时任务绑定对应Profile；3. 专属数据存储到对应Profile工作区。\n\n所以patch的old_string就是上面那段代码块加后面的## 注意事项吗？不对，应该是把旧的内容里的健康领域部署示例结束后的部分，也就是：\n`\n`\n\n## 注意事项\n`\n`不对，仔细看现有内容的结尾：`\n`健康领域部署示例的代码块结束后，直接就是`## 注意事项`。所以我要把新的章节插在示例代码块和注意事项之间。`\n\n`所以old_string就是：`\n`\n`\n\n## 注意事项\n`\n然后new_string就是新的章节内容，再加上原来的## 注意事项。\n\n新的章节内容应该是：\n## 日常运维&使用指南\n部署完成后可按以下规则使用，保证多角色隔离运行：\n### 1. 角色切换\n用户输入对应角色关键词（如「李医生/张哥/王姐」）即可自动切换到对应Profile，上下文完全隔离，不会串扰。\n### 2. 定时任务绑定角色\n如需给指定角色设置定时提醒任务，修改任务配置关联对应角色人设：\n`bash\n# 给营养师王姐（personal-agent）设置每日早饭提醒\ncronjob update --job-id [任务ID] --name \"每日早饭提醒_营养师王姐\" --prompt \"王姐来提醒你吃早饭啦😊 [营养建议内容]\"\n`\n### 3. 角色专属数据存储\n每个Profile有独立的工作区，专属文档、配置、数据存储到对应路径下，避免混淆：\n`\n# 路径格式：~/.hermes/profiles/[ProfileID]/[文件名称]\n# 健康管理师（dev-agent）专属存储示例：\n~/.hermes/profiles/dev-agent/日常健康管理计划_通用版.md\n`\n\n然后把这些加到old_string的中间，再保留原来的## 注意事项。\n\n所以现在调用skill_manage的patch动作，name是vertical-multiagent-deployment，old_string是健康领域示例代码块结束后的部分：\n`\n`\n\n## 注意事项\n`\n`不对，仔细看现有内容里的健康领域部署示例的代码块最后一行是：`\npersonal-agent config set agent.disabled_skills '[\"zhangxuefeng-skill\", \"kongfuzi-skill\", \"powerpoint\", \"claude-code\"]'\n`\n然后换行就是## 注意事项。所以old_string应该是：\n`\n`\n\n## 注意事项\n`\n`对，就是三个反引号结束后，换行，然后`## 注意事项`。`\n\n`然后new_string就是：`\n`\n`\n\n## 日常运维&使用指南\n部署完成后可按以下规则使用，保证多角色隔离运行：\n### 1. 角色切换\n用户输入对应角色关键词（如「李医生/张哥/王姐」）即可自动切换到对应Profile，上下文完全隔离，不会串扰。\n### 2. 定时任务绑定角色\n如需给指定角色设置定时提醒任务，修改任务配置关联对应角色人设：\n`bash\n# 给营养师王姐（personal-agent）设置每日早饭提醒\ncronjob update --job-id [任务ID] --name \"每日早饭提醒_营养师王姐\"

--prompt \"王姐来提醒你吃早饭啦😊 [营养建议内容]\"\n`\n### 3. 角色专属数据存储\n每个Profile有独立的工作区，专属文档、配置、数据存储到对应路径下，避免混淆：\n`\n# 路径格式：~/.hermes/profiles/[ProfileID]/[文件名称]\n# 健康管理师（dev-agent）专属存储示例：\n~/.hermes/profiles/dev-agent/日常健康管理计划_通用版.md\n`\n\n## 注意事项\n`\n这样就把新的章节插进去了，补充了部署后的使用流程，是可复用的内容。",
